

Legions of Tékumel

By Rob Smith
Player Edition

Acknowledgements

My special thanks to Scott McKinlay, who has been instrumental in the development, play testing, and completion of this endeavor.

And to Amanda, who has put up with Scott and me taking over the dining room for play test sessions, trips to conventions, and me locked away in my office writing or painting.

Illustrations from previous Tékumel themed publications are used with permission of the Tékumel Foundation. Art from the following people has been used in this book and the supplements:

Craig Smith
David C. Sutherland
MAR Barker
Rob Smith

The descriptions of unit formations and army deployments are taken from MAR Barker's "Military Formations of Tékumel" and used with permission.

1 Introduction

Fighting tabletop battles with miniature figures has long been a part of the tradition of old school roleplay and, in particular, of Tékumel. When the first miniatures were released for Tékumel back in the 1970s, they largely represented soldiers of the armies of the Five Empires. Priests and priestesses and nonhumans followed on shortly, but the emphasis was always on the military aspect of miniatures for Tékumel. And this makes sense, given that in the early days of RPGs, there was little distinction among “types” of gamers. We were just gamers, or wargamers, and we played all types, tabletop miniatures (historical, fantasy, science fiction), board games, RPGs, and eventually computer games. Like Prof. Barker, I started out as a historical miniatures gamer and then graduated to other genres and types of games.

So the tradition of tabletop battles within the Tékumel fan base is strong. There have been many sets of rules, starting with David Sutherland’s **Legions of the Petal Throne**, and then Gary Rudolph’s **Missúm** shortly thereafter. **Missúm** led to the publication of the several volumes of the **Armies of Tékumel**, which are an invaluable resource for anyone interested in the military aspects of the nations of Tékumel. Then in 1983 Jeff Berry and Prof. Barker published **Qadárdalikoi** as the definitive tabletop miniatures rules for Tékumel.

Some years ago, my interest in tabletop gaming with Tékumel miniatures was rekindled and I searched for rules. Again, I resorted to adapting existing rules to Tékumel, as others have done. I had some fun with using Warlords of Erehwon for small unit games. At this level, the formations and deployments did not really matter so much to me, as we were only representing a few hundreds of men on the battlefield. Others have done similar with Warlords of Aegyptus, Rangers of Shadow Deep, etc. And while these are all entertaining, they still did not capture, for me, the essence of the great battles of Tékumel that these huge, well-trained armies should be conducting.

And so now you have in your hands (or on your screen) the **Legions of Tékumel** (LoT), my attempt to bring Tékumel’s magnificent armies to your tabletop and to represent the majesty, pomp, glory, and devastation of Qadárdalikoi battles. In LoT I have made the unit formations a central component of the system, and so

they have a heavy influence on command and control, movement, shooting, and close combat. Another key component was to keep the number of figures needed to play the game pretty low, in which service I decided that all combat units are to be represented by 12 human-sized figures and that such a unit represents around 4,000 combatants. This means that a Tsolyáni legion of 8,000 men is represented by two LoT units, corresponding to the left and right wings. By contrast, a Mu’ugalavyáni legion of 5,000 is represented by a single unit. Each unit is represented by a single tray in the shape of the unit formation on which the miniature figures are placed. Your miniatures, no matter how they are based, can be used for **Legions of Tékumel**.

I have also implemented magic in a somewhat streamlined but still satisfying manner that captures the flavor of Tékumel battle magic but doesn’t bog down the game in difficult to simulate details. Pre-battle duels and army deployments are also addressed to provide the full experience of the baroque manner of battle among the armies of the Five Empires.

There is a point system to help you balance your armies and a battle set up method that will help you create the battlefield and set objectives. Victory is determined by attaining Glory points. The army that has accrued the most Glory via pre-battle duels, destruction of enemy units, and capturing battlefield objectives wins the game.

But the rules are only half the equation. We play miniatures for the spectacle. I view the miniatures gaming hobby as a three-part hobby, consisting of playing the game, organizing your miniatures, and modeling the armies. Volume 1 of **Legions of Tékumel** is concerned with playing the game. The following volumes of this work presents the armies of Tékumel formatted and presented to make organizing and modeling your armies as easy as possible.

I have shamelessly drawn inspiration from all of the aforementioned works, as well as others, and owe a debt of gratitude to those who came before me. I would like to note one other source of inspiration: Chris Pringle’s **Bloody Big Battles**, which inspired the idea of playing mass battles on a 6’ x 4’ table with a reasonable number of miniatures.

Finally, I want to bring attention to the new **Legions of Tékumel** miniatures, which are available as 3D print-on-demand miniatures or as STL download files. I hope that the new figures in a new format, along with a new, modern set of rules will kindle interest in painting and building Tékumel miniatures, especially armies! You can see pictures and order files and miniatures at www.legionsoftekumel.com

1.1 What You Need to Play the Game

We think **Legions of Tékumel** are best played with miniature figures representing the various units of humans, nonhumans, and creatures deployed on the battlefields of the Five Empires. Painted miniatures provide a visual cue to the types of soldiers that make up a unit, by showing the armor and weapons, as well as species. However, miniature figures are not strictly required to play **Legions of Tékumel**. You can simply print or cut out the shapes of the unit formation trays (see below) and attach a label with the name of the unit.

Apart from the miniatures, you will need a playing area and terrain. For full sized Qadárdalikoi games, we recommend a 4' by 6' battlefield area. This will easily accommodate 10 to 16 units per side. For smaller battles, you can use smaller width, but we do recommend a depth of at least 4' to allow for some pre contact shooting and maneuver.

Three dimensional terrain also adds visual appeal. For area terrain, flat mats of the appropriate shape may be used to designate the edges of the terrain, and appropriate trees, shrubs, rocks, or buildings placed on the mats to indicate the terrain type. These 3D features should not be fixed to the terrain mat so they can be moved to allow for units to move into the terrain area. As with miniatures, 3D terrain is not strictly required. You can certainly make do with colored pieces of cardstock or even paper.

As mentioned above, unit formation trays are a critical part of Legions of Tékumel. The unit formation trays perform two critical tasks: 1) they visually indicate the unit's formation, which will affect all aspects of the unit's performance on the battlefield, and 2) they make moving units on the tabletop easier.

Finally, a Spell Card deck and Spell Power Points card is required for each unit of Magic Users. These cards can be downloaded and printed, or you can purchase card decks from Legions of Tékumel Miniatures.

The game requires the following additional equipment:

- Twenty-sided dice ("D20").
- A tape measure per player indicating inches.
- Markers or counters to indicate units' status.
 - The following scheme is recommended:
 - Disrupted - Yellow or Green counter
 - Spent- Red counter
 - Glory - Gold counter or coin
 - Magical Effect - Various colors with the name of the spell on one side.
- Casualty Markers to indicate figures lost due to shooting, close combat, magic, etc. You can mark casualties in several ways:
 - Remove a figure for each casualty suffered
 - Put a casualty cap or ring on figures that are casualties
 - Use a numbered counters showing the casualties suffered
 - Use a small die next to each unit showing the casualties suffered
- (Optional) a large 8-sided die as a useful clock to keep track of game turns
- (Optional) a card template to check where a unit's 3" Zone of Control extends to and marked to show 45° arc.

Of course, if you prefer to use different colored indicators or miniature dioramas of wounded or fleeing soldiers, smashed artillery, broken wagons or carts, etc., this is also possible.

2 The Soldiers

2.1 Units

Combat Units represent collections of fighting soldiers, human and nonhuman. They vary from small elite formations of a couple thousand men to phalanxes of 4,000- 6,000. Depending on the number of men, the unit is classed as Very Small (fewer than 2,000), Small (2,000 – 3,500), Average (3,500 – 4,500), Large (4,500 – 5,500) or Very Large (more than 5,500). This will affect a unit's combat capabilities.

For Tsolyáni armies, a full-strength legion (*Nikómi*) is represented by two wings of 4,000 men. Understrength legions may have only a single unit, which may be large or small, etc. Yán Koryáni *Gurék* may be one, two, or more units of varying strength representing the variations in weapons, armor, and fighting styles. Mu'ugalavyáni legions (*Sráish*) of 5,000 are usually represented by a single Large unit. Salarvyáni *Nchésh* are composed of several units of different sizes, representing various armor, weapons, and fighting styles. A Livyáni *Llüneb* is usually composed of a single unit, of which the size may vary considerably; the largest may be represented on the tabletop by two units.

Some units may be of mixed troop types, in these cases the figures may not all be the same. For example, some Yán Koryáni units may represent a mix of armored swordsmen and archers. In this case, some of the figures are archers and some are swordsmen.

Special Combat Units include creatures like *Serudlá*, and equipment like Lightning Bringers, Air Cars, and Artillery. A *Serudlá* base represents about 30 creatures and possibly some attending skirmishers. Artillery, Lightning Bringer, and Air Car bases represent 10-20 machines, depending on their size, and crew.

The other sorts of units include Magic Users, Heroes, and Commanders, which represent from dozens to a few hundred individuals.

2.3 Armies

Armies are composed of different sorts of units, including Combat Units, Army Commanders, Magic Users and Heroes. The construction of armies is fully

covered for each nation in the later volumes of **Legions of Tékumel**.

2.3.1 Units

There are several types of units in **Legions of Tékumel**. In general, they function much the same way, but are handled differently in shooting, close combat, and magic.

2.3.1.1 Combat Units

All Combat Units are composed of 12 figures and represent the primary combat units of the armies of the Five Empires and smaller nations, ranging from less than 2,000 to more than 5,500 human equivalent combatants.

Special Combat Units should be on a base that is 2" wide. Artillery and Lightning Bringer units are composed of one model and crew and represent 10 - 20 artillery pieces. Air Car units may have one or two models of flying vehicles with crew inside. *Serudlá* units are composed of a single model and represent 30 or so beasts and maybe some supporting skirmishers.

While 12 human sized figures are recommended for all units, it is OK to use fewer (or more). For example, 12 *Ahoggyá* may not fit on a unit tray, so fewer figures are fine. Same for *Hláka* or other oversized figures.

2.3.1.2 Army Commander

The Army Commander is represented by a group of one to four figures. Generally, Army Commanders in the Five Empires stand on prominences or high daises behind the armies to conduct battles. Army commanders may command any units in the army. Army commanders of the Five Empires rarely lead units personally in combat, but it has been known to happen.

Commanders that are not attached to units may evade enemy units. Commanders that are contacted by the enemy will fight with their combat values.

2.3.2.3 Magic Users

Magic Users units are represented by one to four figures. Like commanders, magic using contingents of sorcerers and priests usually stand on a high dais to conduct their incantations and rituals. Most Magic Users on Tékumel do not fight on the battlefield, other than with their magic. The Quality of the Magic Users determines the effectiveness of their spells. The Livyáni

have Magic User units that are also combat units and commanders, and can move and fight like any other unit, as well as cast magic.

2.3.2.4 Livyáni Commanders and Priests

The Army Commander of a Livyáni army are derived from the magical *Díodaz* for that *Chároneb* (region). The senior general and priests make up the Army Commander unit and stand to the rear of the army, usually on a dais. More junior commanders and priests are allocated out as Units or Heroes.

Some *Díodaz* are quite large and are equipped to fight. These are classed as infantry units from Very Small to Average size and are also Magic Users. These *Díodaz* are infantry units in their own right and cannot be attached to other infantry units.

2.3.2.5 Heroes

A Hero figure mounted on a 1" square base represents a group of adventurers, a special selection of volunteers from a unit, fighting magic users (for the Livyáni or some nonhumans), etc. Heroes have an outsized effect on the battlefield when compared with their numbers. They often have magical weapons and armor, magico-technical devices of the ancients, and may also be accompanied by Hero sorcerers and priests. Special capabilities may be assigned to Heroes for scenarios.

2.3.2.6 Transport Units

Transport Units include *Chlén* carts and wagons, gaggles of slaves, and any other unit that has no combat capabilities. Transport units may exist to move special equipment, like a Lightning Bringer, into position. They may also exist for certain scenarios. They are mounted on a base with a 2" frontage. Since they have no combat ability, Transport Units are generally destroyed if contacted by an enemy unit or suffer a casualty from shooting or magic, unless noted in their unit notes.

2.3.3 Attaching to Combat Units

Commanders, Magic Users, and Heroes may attach to friendly combat units of infantry or artillery and fight and shoot with that unit by adding their Charge, Melee, and Shoot values to the unit's. When attached to a unit from the beginning of the movement phase, the attached unit's Command modifier is applied to the combat unit's command roll.

When attached to a unit, Commanders, Magic Users, and Heroes may not be targeted for shooting. Commanders, Magic Users, and Heroes may only be

targeted for shooting when not attached to a unit; they may also be charged. They may evade, if eligible.

2.4 Unit Stats

Units in Legions of Tékumel are defined by their "statistics," which reflect the units training and morale, shooting and fighting abilities, weapons and armor, species, and other special attributes. These stats are defined for each unit in the Armies of the Five Empires and the other army and campaign books.

2.4.1 Troop Quality

Troop quality reflects the training and morale of the unit. The quality affects many aspects of the game, including the unit's combat values and resilience. The quality ratings are:

EL: **Elites** are the absolute best units in the army. They get the best armor, weapons, and other equipment. They are also able to recruit the best soldiers. They are usually commanded by skilled officers of high social status. But one should be aware, that high social status alone, does not equate to eliteness on the battlefield. Elites are usually Heavy Infantry but may be Medium or even lighter in some instances.

VT: **Veterans** are highly experienced units that usually bear the brunt of fighting in most armies. Veterans usually are highly trained, but also often have actual combat experience.

AV: **Average** are units with good training and equipment, but probably real no battle experience.

RW: **Raw** units are new and untested units. The conscripted skirmisher units employed by most armies are almost universally Raw.

2.4.2 Troop Values

In addition to Quality, troops are categorized according to their armor (Extra Heavy, Heavy, Medium, Light, Unarmored, and whether it is Steel and/or Magical), Size, Shooting Ability, and more. All of these variables are assigned numeric values and used to calculate a unit's Basic Factors, which include:

CH: The **Charge** value used when a unit initially enters close combat with an enemy unit or units. The unit does not have to be on the active side to use the Charge factor. It is assumed they take the best action for the initial round of combat, whether that means a short

counter-charge, bracing weapons for impact, throwing missiles, exchanging ranks, or whatever.

ML: The **Melee** value is used for units that were in close combat the previous combat round.

SH: The **Shooting** value is used when a unit engages in ranged shooting against an enemy unit.

DF: The **Defense** value is Left shifts from the enemy Charge, Melee and Shooting factors.

CD: The **Command** value is a modifier to the Command Roll for that unit.

2.5 Weapons

Weapons are categorized as follows for shooting and for Close Combat.

2.5.1 Close Combat Weapons

IM: **Improvised** (miscellaneous Close Combat weapons, including knives, clubs, maces and swords lacking significant training)

SW: **Sword** (high quality edged weapons and extensive training in individual or unit combat skills)

2H: **Two Handed Weapon** (heavy axes, poleaxes, halberds, falxes, two-handed swords)

JS: **Javelin/Light Spear** (light spears thrown at short range and used single handed in combat)

SP: **Spear** (long spears usually used single handed and rarely thrown)

PK: **Pike** (very long spears used two handed and depending on tight formations)

2.5.2 Ranged Weapons

JS: **Javelin/Light Spear** (light spears thrown at short range and often used single handed in combat). This can include other throwing weapons such as bolos and clubs. Also, blow darts.

SL: **Sling** The preferred hunting weapon of many rural communities, requiring only a leather strap and well-shaped stones. The better slingers will use lead or other metal shot (The shiny metal spheres of the ancients are especially prized, as they cannot be melted and worked and so are good for little else.).

BW: **Bow** The simple self-bow, made of *Tíu* or *Ajátí* woods, is common among many peoples of the Five Empires, shooting arrows of the same woods or *Nál* reed. Heavy and Medium Close Combat troops who are also equipped with composite bows usually get the BW weapon to represent the lesser amount of ammunition and tactics not optimized for shooting.

PC: **Pistol Crossbow** These small crossbows are favored by the Shén and nearly all their units are at least partially equipped with them. The Tinalíya are partial to these weapons, and they are found in their legions that are deployed by Livyánu.

XB: **Crossbow** The standard crossbow, reloaded either by hand pull, lever, or with a stirrup and belt hook. The former have a greater rate of shooting, but the latter hit harder.

HB: **Heavy Crossbow** The heavy weapons are used by only a few units in the field, as they require a winch for most troops to reload them. The Shén are known to use this and, although they can forgo the winch, also find them much slower than their favored Pistol Crossbow. Their factor is not much higher than the Crossbow because of the slow rate of shooting. Moving reduces their shooting quality.

SB: **Strong Bow** The strong bow includes both longbow and particularly powerful composite bows. They offer longer range and more penetration than the self-bow. Only dedicated archery units usually are counted as Strong Bow.

LA: **Light Artillery** These represent smaller bolt or shot throwers using torsion power, similar to very large crossbows. They may be mounted on carts and moved during the battle. Light artillery not on a cart may be manhandled and so move as Limited Movement Type. Alternatively, they may be mounted on carts and move as Formed Movement type.

HA: **Heavy Artillery** These represent heavy catapults and the largest ballista-like pieces. They may be set up as static pieces that may only pivot, or mounted on wagons, during which time they may not shoot, to move into position. Once set up they may not be moved again, except to pivot.

LB: **Lightning Bringer** These are the heavy energy weapons of the Ancients. There are two versions, Small and Large. They have the same combat effects, but small ones are easier to transport and so are more

expensive. Small Lightning Bringers may be deployed in carts and shot from the carts. Heavy Lightning Brings may be set up as static pieces or transported in wagons and set up to shoot; once set up they cannot move again, except to pivot.

2.6 Attributes

Attributes are particular aspects of the units. In many cases, the effects of the attributes are calculated into the unit's values. Some other attributes affect how the unit acts in certain situations. .

C – Shoot and Charge. Only units with the Shoot and Charge attribute may shoot in the Offensive Shooting Phase immediately after they move into contact with an enemy unit.

D – Devastating Charge. This attribute represents units that have a better than average charge factor due to training or cultural factors. For example, N'lüss units are particularly hard hitting, and so get the Devastating Charge attribute. Units with Devastating Charge get a +2 on their charge, which is calculated into the Charge factor.

Fa - Fanatics. Fanatics represent units that are totally devoted to their cause and will fight to the death for it. Fanatics can be of any Quality rating, as such devotion is not related to training. Fanatical units fight until the last stand is removed. They are, however, affected by becoming Spent based on their Quality. In addition, Fanatics that are within movement range of a hated enemy they can see, on the unmodified roll of a 12 or higher, must charge that enemy. If they cannot reach due to moving only half, necessary changes of direction, terrain effects, or other causes, they still must move at maximum allowed speed toward that enemy. They will burst through friends to get to the enemy. If they cannot normally interpenetrate such friends, both the fanatical unit and any burst through become immediately Disrupted. Unless specified, Fanatical units treat all units of the opposing army as "hated." However, some units may only hate certain foes, such as Shén versus Ahoggyá or other egg-groups of Shén. In these cases, they only suffer the Command Roll effects when near these "hated" units and only fight to the death when in combat with those foes.

Fl - Flyers. Units that can fly over the battlefield. These include Hláká (for which the Flying attribute is already

accounted for in their species attributes) and Air Cars, which are in essence Carts (see below) that can fly.

Fr - Fragile. Units with poor motivation and discipline, or poorly commanded, could be particularly ready to surrender to the enemy at close quarters, and slow to rally from disorder. A Fragile unit suffers a -2 penalty in Charge and Melee, which is applied to their factors.

M -Melee Expert. Some troops are particularly well trained or equipped for melee, compared to the standard for their weapon type. It may also represent a mixture of weapons best for charge and for melee, such as pikes and halberds, for example. Units with the Melee Expert attribute get a +2 on Melee, which is calculated into the factor.

P - Passive. Some armies or generals were especially passive, either because doctrinally they preferred to let the enemy come to them, or because they had insufficient information to have a clear battle picture, or just because they were congenitally indecisive. Livyáni units are often Passive due to their reliance on magic to defeat the enemy. A Passive unit suffers a -2 penalty on its Command roll unless it is Disrupted.

Sa - Sappers. Sappers are specialists at siege warfare, including assaults on enemy fortifications. Fortifications are one factor less effective against units assaulting them with Sappers. For example, Barricades (one shift left) have no effect against a unit assaulting them with Sappers. Additionally, Fortifications with defensive shifts of 3-5 cannot be assaulted at all unless the attacking troops have Sappers.

Sk – Skirmishers. Units that are skirmishers are expert at moving and fighting in looser order than other troops. For that reason, they get to move one grade faster than their formation would normally indicate. Also, when shooting at targets who are skirmishers, there is a shift 2 Left.

T()– Terrain Specialists (type). Units with this attribute are not slowed in the defined terrain type, do not suffer any command negative command modifier while in that terrain. If the terrain in which they specialize offers any combat bonus, that is increased by one column shift. In addition, the cover bonus offered to opponents for Close Combat are negated. Some units may have more than one specialty. For example, the Legion of the Clan of the Inverted Hand, light infantry specialists from the Kurt Hills, are T(sh,wd) for steep hills and woods; this

means they are not slowed going up steep hills nor moving into, through, or out of woods.

U – Undead. Units of all or mostly undead react to combat differently from living troops. However, in Tékumel, the undead, especially the more capable ones, are not mindless automatons heedless of their own continued existence. They have varying degrees of awareness and drive for self-preservation. In addition, the officers of such units may be living beings or at least the most advanced of the undead, and so are certainly aware of their own mortality. Undead units are never Spent, but they are destroyed in the normal fashion. Additionally, they are never Halted and never forced to Retire or Flee. And, finally, any command result less than 2 results in No Move, only; they are never forced to retreat from a low Command Roll.

P – Poison. Some formations may use poisoned missile or melee weapons, or have this as an intrinsic attribute, such as Serudlá. If a casualty is inflicted by a poisoned weapon, the unit makes a poison attack, which is a roll of 1D20; on a roll of 11+ an additional casualty is caused.

C – Cart. Carts are transports pushed or pulled by soldiers or slaves. Light Artillery and Small Lightning Bringers may be mounted on carts, which allow them to move more quickly and shoot in the same turn in which they move. Air cars are transports with both the Cart and the Flyer attributes.

W – Wagon. Wagons are heavy four-wheeled transports pulled by slow Chlén beasts. Heavy Artillery and Large Lightning Bringers may be transported by Chlén-drawn wagons. They must be set up to shoot and may not be moved again after being set up.

2.6.1 Species

Species have various attributes that may affect Unit Factors. Most of these special attributes are calculated into the basic Unit Factors. Some have special effects, which are noted below.

2.6.1.1 Ahoggyá

The Ahoggyá can count any edge of the unit as the front for movement. For combat, they have no flank or rear. They are swamp dwellers and so have the T(swamp) attribute. Ahoggyá also hate Shén; and are considered Fanatics against the Shén.

2.6.1.2 Hláka

The Hláka have the ability to Fly. Their flying movement is 24". Flying movement is explained in the movement section. They also frequently use poisoned weapons.

2.6.1.3 Pé Chói

The Pé Chói are usually assigned T(woods) terrain specialists. In addition, Pé Chói must achieve a Move* in order to cross a stream other than at a bridge or ford.

2.6.1.4 Páchi Léi

Páchi Léi are T(woods) terrain specialists. They may also go berserk; when the Command roll for a Páchi Léi unit is a natural 20 (regardless of modifiers), the unit goes berserk and becomes Fanatic toward the nearest enemy. If there are no enemy units visible, they will become Fanatic against the nearest friendly unit. The unit will continue as Fanatic until it suffers Disruption from shooting or combat.

2.6.1.5 Pygmy Folk

The Pygmy Folk are fierce but small, which is reflected in their unit value modifiers. They are T(steep hill) specialists.

2.6.1.6 Shén

The Shén hate the Ahoggyá and are considered Fanatics against them. The same applies to other egg groups of Shén.

2.6.1.7 Swamp Folk

The Swamp Folk are sturdy fighters. They seldom wear more than light armor. They have the T(swamp) attribute.

2.6.1.8 Tinaliya

Their small size limits their combat effectiveness compared to the larger species. They are, however, prodigious Magic Users.

2.6.1.9 Ssú

Ssú, the Enemies of Man, have not traditionally fielded large field armies in the current era. However, one never knows when that could change. The Grey Ssú are the most prominent in the area of the Five Empires. They seldom wear armor, but they are very powerful Magic Users, and all of their warriors have the capability to hypnotize opponents for brief moments. Small contingents of Black Ssú could be fielded as part of a major campaign.

2.6.1.10 Hlutrgú

These rubbery, frog-like nonhumans have been known to pour forth from their swampy enclave of the Layóda Swamps and engage in pitched battles with human troops. They wear no armor and fight with crude weapons of javelin, darts, and clubs.

2.6.1.12 Other Races

Other races of sentients, such as the Hlüss, Shunned Ones, Miháli, and Hokún, have not demonstrated either the desire or the ability to field mass forces. However, there has been a movement by the Ssú to forge alliances with some of the species not considered fully sapient. These could appear as allied units in a Ssú army.

2.7 Unit Status

Units have various states or statuses during the game. These different states determine how they perform on the battlefield, from following orders to shooting to close combat.

2.7.1 Good Order

This is the default value of all units when initially deployed. It assumes they are at their peak ability to move and fight on the battlefield.

2.7.2 Disrupted

Units may become Disrupted for many different reasons, from combat action by the enemy to terrain effects and more. Disrupted means that the combat and movement capabilities of the unit are degraded, but only temporarily. When Disrupted, a unit rolls on the Disrupted column on the Command Rolls table. In addition, there are modifiers for shooting and close combat while Disrupted.

2.7.2.1 Multiple Disruptions

A unit that is already Disrupted and suffers another **combat** cause of Disruption suffers an additional casualty. A combat cause of Disruption is disruption that occurs as a result of:

- a roll on the Combat Results chart due to shooting, charge combat, melee combat, or magical attacks
- not able to complete a mandatory retreat or flee movement from combat or Command rolls.
- ending a Close Combat phase in contact with the enemy

Disruption from terrain and formations **will not** cause additional casualties for units that are already Disrupted. However, a unit that is Disrupted from terrain **WILL** suffer an additional casualty if it is additionally Disrupted as a result of combat.

2.7.3 Spent

Taking casualties from shooting and close combat will eventually cause a unit to become Spent. The number of casualties to cause a unit to become Spent varies depending on the unit Quality or Type according to the Casualties Effect table. For example, when a Veteran unit has suffered 4 casualties, it becomes Spent.

Casualties Effect		
Quality	Spent	Broken
Elite	5	8
Veteran	4	7
Trained	3	6
Raw	2	5
Artillery, Magic Users	1	3
Serudlá, Heroes, Command	3	6

Units that are Spent are less likely to follow orders as desired and are less proficient at Shooting and Close Combat. Unlike Disrupted, Spent status is very difficult to recover from. The only way a unit may recover from Spent is to gain back lost figures via Command Rolls to the point where they are below the Spent level. Glory points for Spent units are not awarded until the end of the battle, as a unit may recover from Spent status during the game.

2.8.3.1 Spent & Disrupted Units

A unit may be both Spent and Disrupted at the same time. The effects of both statuses apply. So, for command rolls, such a unit will roll on the Disrupted chart and also apply the modifier for being Spent. A Spent and Disrupted unit that is shooting will halve its shooting factor and also apply the Left Shift, etc.

2.7.4 Broken

Units that suffer sufficient casualties from Shooting or Close Combat may reach the point where they become Broken. Units may also be Broken from close combat results even if they have not suffered the necessary casualties. Broken units are considered destroyed and are immediately removed from the battlefield and the game. Broken units cannot be recovered, and no

command rolls are made for Broken units. Glory points are immediately awarded to the opponent when a unit is Broken.

2.8 Glory

Winning Glory is a fundamental aspect of warfare on Tékumel, at least within the Five Empires and nearby states. Indeed, victory of a battle is determined by which side accumulates the most Glory Points.

2.8.1 Winning Glory

Glory points are accumulated during three parts of the battle: pre-battle challenges, the battle itself, and at the end of the battle. During pre-battle challenges, points are awarded in two different ways, depending on how challenges are resolved, see 10.5 Pre-Battle Duels.

During the battle, Glory points are earned immediately for the following occurrences:

- Destroy Raw enemy unit - 1 Glory point
- Destroy other enemy unit - 2 Glory points
- Overrun an enemy dais - 3 Glory points

At the end of the battle, additional Glory points are awarded based on the ending condition of the armies and possibly Towns occupied (see 3.3 Built-up Areas).

2.8.2 Spending Glory

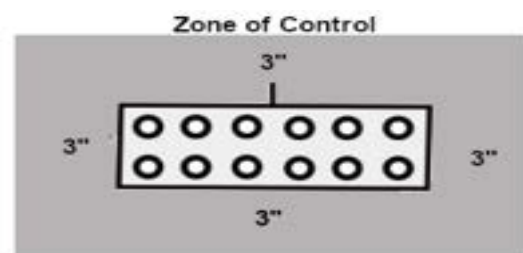

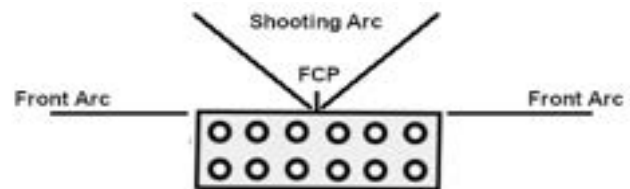

During the battle, Glory won from pre-battle challenges and by destroying enemy units or dais may be spent to obtain re-rolls. After dice are rolled for any action or event, the rolling player may declare the use of a Glory point to get a re-roll. Spending a Glory point allows you to reroll one D20. A single die may only be re-rolled once by expending Glory.

The rerolled result must be accepted. No roll may be rerolled more than once. Glory spent on rerolls is not counted for victory at the end of the battle.

2.9 Important Elements of a Unit

These diagrams illustrate how to determine key features of a unit such as its:

- Front Center Point (FCP) which is used to measure distances for shooting and movement. It varies per formation and may represent the FCP of a portion of the unit when splitting shooting among several targets.
- Front movement arc (measured from FCP)
- Shooting arc, which is 90 degrees measured from the FCP of the position of the unit shooting at the specified target.
- Front edge (to determine flanking shots and charges)
- 3" Zone of Control

3 Terrain

Terrain plays a vital role in shaping the battle's outcome. For instance, in Legion of Tékumel, the features that are at least four inches across will typically be represented. Smaller ones will either be merged into larger ones or completely stripped away.

There are several ways to determine the terrain on the tabletop battlefield. You can create your battlefield based on a specific scenario where the terrain is predetermined. These could include battles from Tékumel's history, like the Battle of the Temple of Chánis or the Battle of Rü. Or they might be battles that occur as a result of a roleplaying campaign and the terrain is defined by GM generated maps.

Alternatively, you can devise your own acceptable way to determine the terrain, such as one side sets up the terrain the other chooses which side to set up on.

The terrain described below is for general understanding of what is represented on the tabletop. These descriptions include the combat, movement, and visibility effects.

3.1 Hills

A high ground is referred to as hills. They have three basic attributes: height, gradient, and size.

Height can be described as either Level 0, Level 1, or Level 2. The tabletop, on the other hand, is regarded as Level 0. A hill or a certain area of ground that's higher than the tabletop can be referred to as a hill, or a "contour," of L 1. If the terrain around the hill is significantly higher, then it's a Level 2 hill.

Size may be as small as 4" across, or as large as several feet long and wide. A single Hill can have several branches and be of very irregular shape. The hills used in Terrain Determination are much simpler, however.

The gradient is referred to as either "gentle," "steep," or "impassable," and it reflects the angle of the hill's slopes. Impassable, gentle, and steep hills can have more than one level. It's also possible for a hill to be both gentle and steep in some places.

A variety of markers can be used to identify the types of steep slopes, such as small stones. Impassable slopes

also have varying degrees of sheerness and should be marked as such.

3.2 Watercourses

The three kinds of watercourses are rivers, streams, and lakes.

Rivers are wide or deep flowing water, represented as at least 1" wide on the tabletop. They are usually considered impassable to most troops.

Streams are narrower or shallower and represented as ½" wide on the tabletop.

Lakes should be more than 4" across of any shape. They represent either natural or man-made impassable bodies of water. Smaller lakes can be represented by Marsh.

3.3 Built-Up Areas

Built-Up Areas (BUA) are of two kinds: "Villages" and "Towns".

A *Village* indicates an area of scattered clan houses, tiny villages, or the rural estate of a major clan, usually surrounded by farmland with occasional tree lines, fences, low walls, etc. Taken together, these features offer some protection to a legion sized formation but do not solidly block all LOS through the area they cover. The size of a Village is typically a rectangle 4" to 6" long on each side, represented as a patch of fields with a one or two building model.

A *Town* indicates a denser collection of more substantial buildings than a village, hence blocking LOS and providing better cover. This could be an actual town or a temple complex, etc. The size of a Town is typically a rectangle 4" to 6" long on each side, represented by a base depicting a paved area with one large or a few smaller building models.

The best way to represent a BUA is a flat mat of fields and roads with free-standing buildings that can be moved to accommodate the units moving into or through it.

BUAs may be placed independently, or they may be grouped together to form larger towns and cities. It is also common to have one or two Town BUAs surrounded by Villages.

3.4 Fortifications

Fortifications are of four kinds: barricades, entrenchments, forts, and fortified walls (including Sákbe road).

Barricades are the most basic form of fortification, consisting of miscellaneous stuff piled up to protect from shooting and bar easy movement.

Entrenchments represent more extensive barricades combined with earthworks. They also assume some obstacles have been created along the front of the entrenchment: abattis, stakes, barricades, ditches etc.

Forts are either fully developed systems of earthwork redoubts or permanent stone or brick fortifications.

Fortified Walls are linear walls of various heights and defensive complexity. Their cover rating determines their height, roughly.

Barricades and entrenchments should be represented by bases 1" deep and as wide as the scenario requires. For scenic effect, sandbags, obstacles, etc., can be placed along the front edge of a unit behind barricades.

Fortified walls should be represented by walls 1" - 3" deep and may be of any length determined by the scenario.

Like BUAs, Forts are typically a rectangle 4" to 6" long on each side, represented with a base depicting a paved or bare-earth area, with some suitable modeling to represent their walls or embankments. Forts may be connected by fortified walls. Larger Forts may be made up of several Forts placed adjacent to one another.

3.5 Vegetation

Vegetation is of five kinds: woods, crops, swamps, marches, and Food of the Ssú.

Woods includes any vegetation which impedes both movement and visibility and provides cover: forests, jungles, dense vineyards or orchards.

Crops include any vegetation which obstructs visibility but does not seriously hinder movement or give good cover from shooting: high corn, open vineyards or orchards. sparsely wooded areas.

Marshes are wetlands, usually grassy, that impede movement but have no effect on visibility.

Swamps are wetlands with dense foliage that block visibility and severely impede movement.

Food of the Ssú is similar to Woods.

Represent these with a base or patch of cloth of the appropriate color, and place on it model trees, vines, tussock grass, etc., which can be moved aside as necessary to make space for troops.

3.6 Rough Ground

Rough Ground refers to the nature of the firmament on which the troops are moving that is not considered Open Country. There are three sorts of Rough Ground: Soft, Sandy, and Rocky.

3.7 Roads and Sákbe Roads

Not every path or trail is significant enough to be shown on the tabletop. Roads should represent those which are broad enough, and with a good enough surface, to significantly assist the rate of progress of a marching column of troops. A road should be depicted on the table as ½" to 1" wide.

Sákbe roads, the three-tiered highways of the Five Empires, are often features near the battle, but rarely a central feature of it. They are represented by a three-tiered road that is 2" wide. Sákbe roads count as fortified walls for cover and movement across them and may be interrupted periodically by forts (Sákbe road towers). They are roads for movement along them. The Sákbe roads have a high side, which usually offers cover of 3 to 5 Left shifts and requires the Sapper attribute to cross over. The low side is usually a 2 Left shift, but poorly maintained roads may have a 1 Left shift. Troops may assault up the low side without assault equipment.

For the effects of bridges, see 3.2 Watercourses.

3.8 Open Country

For completeness: any terrain that is not already specified above is "Open Country."

3.9 Stacked Terrain

It may be that sometimes multiple types of terrain may exist in the same area, such as a wooded, gentle hill or a rocky, steep hill. In that case, the effects are also added. For example, a unit attacking up a rocky steep hill will suffer a 3 Left shift (2 Left for the steep hill and 1 Left for the Rocky ground) and the defending unit will suffer a 1 Left shift for the Rocky ground.

3.11 Other Terrain Types

Other unusual terrain types may occasionally be required, e.g., impassable lakes, which prohibit

movement, but not visibility, or escarpments that cannot be crossed. Terrain that does not fit into the standard types covered above should be specified in Scenario Rules.

3.12 Ground and Time Scale

The ground scale for **Legions of Tékumel** is flexible. One inch on the table generally represents 50 paces (roughly a pace is a meter or a yard) on the battlefield but can be more or less. One game turn is normally two *Kíren* (one hour) of battle but may be as little as one *Kíren* or as much as four or more. The elastic scale lets us 'stretch' the smaller battles, and compress the larger ones, so they all fit a sensible playing area and time. Note that the weapons ranges are designed to represent the possibility of a unit to extend its ranged combat ability against the enemy by sending forward advanced skirmishers and small units in front of the main line of the formation.

4 Sequence of Play

A scenario typically comprises a set number of turns. The side that moves first in a scenario is designated as the "Attacker". The other side is the "Defender." In each turn, the Attacker is the Active player in the first four phases, and the Defender is the Active player in phases five to eight.

Each Turn consists of eight phases, as detailed below. After the eighth phase, repeat for the next turn.

4.1 Sequence of Play Summary

The eight phases comprising a Turn are:

1. Attacker Command & Movement
2. Defensive Shooting by Defender
3. Attacker Shooting
4. Close Combat by both Players
5. Defender Command & Movement
6. Defensive Shooting by Attacker
7. Offensive Fire by Defender
8. Close Combat by both Players

4.1.1 Sequence of Play: Command & Movement

- Active player may play a Spell Card for each Magic User unit.
 - Non-active player may try to block the spell
 - Resolve magical effects if not blocked
- Active player declares, rolls for (if necessary), and moves each unit in turn.
 - Units may recover lost figures, which are placed instead of moving the unit.
- Opponent carries out any Evade moves that apply as they arise.

4.1.3 Sequence of Play: Defensive Shooting

- Non-active player may play a Spell Card for each Magic User unit.
 - Active player may try to block the spell
 - Resolve magical effects if not blocked
- Non-active player chooses enemy units as targets and resolves the effects of shooting on each target unit in turn.
- Active units that had moved and suffered a Halted result are moved back to the point at which they were shot at.

4.1.4 Sequence of Play: Offensive Shooting

- Active player plays a Spell Card for each Magic User unit.
 - Non-active player may try to block the spell
 - Resolve magical effects if not blocked
- Active player chooses enemy units as targets and resolves the effects of shooting on each target in turn.

4.1.5 Sequence of Play: Close Combat

- Active player chooses to resolve close combat in any order, except that Charges must be resolved before Melees.
- Any close combat resulting in a continuing Charge on a new enemy unit because of Pursuit movement must be resolved immediately.

5 Command and Movement

5.1 Movement Summary

In the Movement Phase, the Active Player may attempt to move any of his units. He selects each unit in turn that he wishes to move, completes that move and then selects the next unit to move. A move may be interrupted by the Opposing Player rolling to cast a spell or to evade.

Commanders, Heroes, and Magic Users do not have to make a Command Roll, but instead may always move Full at the Nimble rate. For all other units the Active player must, unless otherwise exempt, make a Command Roll using the Command table to determine how far the selected unit is allowed (or obliged) to move: and move it accordingly.

The Active Player must complete each unit's movement before going to the next unit. (In multiplayer games, all players on the same side may move their units simultaneously.) A player may not change a unit's move after he has rolled for the movement of another unit. Disrupted units **MUST** make a Movement roll.

5.2 Movement Distance

Full normal movement allowances for different movement rates are shown in the Movement table. **The Movement Type is determined by the unit's formation.**

Movement Type	Move	Front Arc	End of Move Facing
Nimble	12"	45°	Pivot
Flexible	9"	45°	Pivot
Formed	6"	45°	Direction of move
Limited	3"	45°	Direction of move
Stationary	Pivot only	na	na

If None/Light Armor, move one class faster, except Stationary.

If Skirmisher, move one class faster, except Stationary.

Linear obstacle -2" of movement.

Difficult terrain is half movement.

5.2.1 Command Roll Modifiers

After rolling 1D20, the player adds or subtracts any of the modifiers below which apply to the unit for which he has rolled. Modifiers are cumulative.

5.2.1.1 Command Radius

The Command Radius of commanders on a dais or flying is limited only by line of sight. Commanders on the ground have a Command Radius of 6" and line of sight.

5.2.1.2 Command Bonus

Some Army Commanders, Heroes, and even a few Magic Users may have a positive or negative Command Bonus. If the Army Commander is on a dais or flying, the positive command bonus may be applied to all units under its command and within 6". For all other types and instances, the positive Command Bonus is only applied to a Combat Unit to which the unit with Command Bonus is attached.

Negative Command Bonuses must always be applied when units under that Army Commander are making a Command Roll. The negative Command Bonus must be applied when a Hero or Magic User with a negative Command Bonus is attached to a unit that is making a Command Roll.

Command Modifiers	
Out of Command/Invisible	-2
Command Bonuses	Varies
Formation	Varies
Rare Formation	-3
Difficult terrain	-2
Spent	-3
In Close Combat	-3

5.2.2 Command Table

The result of the a D20 roll plus any applicable modifiers is cross-indexed with the Command Table to determine the unit's Modified Movement Allowance. The table is in two sections. The left side is used by units in good

order (i.e., not Disrupted); the right side by units that are Disrupted.

Command Rolls		
Good Order	1D20	Disrupted
Full Move or All recover 1 figure*	20+	Rally and Full Move*
Full Move or T/V/E recover 1 figure*	17-19	Rally and Full Move*
Full Move or V/E recover 1 figure.*	13-16	Rally and Full Move
Full Move.	7-12	Rally and Half Move
Half Move	3-6	Rally in Place. No Move
No Move	1-2	No Rally. No Move
Retire Half move	0-1	No Rally, Lose 1 base. Retire full move. Disrupted
Retire full move. Disrupted.	-2+	Broken. Remove from tale.

*If in combat, rally and may break off half move. If rolling for required pursuit must pursue.

5.2.2.1 Full move

Unit may use its full movement allowance.

R(aw) | T(rained) | V(eteran) | E(lite) Recover 1 Base - If the unit is of at least the troop quality specified and has lost any bases as casualties during the game, instead of moving it may spend all of its movement allowance rallying and recover one lost figure. This may allow a unit to recover from Spent status.

5.2.2.2 Half move

The unit only receives half its movement allowance.

5.2.2.3 No move

The unit may not move at all during this movement phase. It may not change facing, nor may it change formation.

5.2.2.4 Retire Half Move

The unit MUST move away from the enemy until it has moved half its movement allowance. Obligatory retirement ignores all movement penalties for moving backwards or for crossing difficult terrain. If the unit hits impassable terrain such as a river, it halts and suffers a Disruption (and casualty if already disrupted).

Movement "away from the enemy" means all of the unit must end further from all enemy within 12" than where it started. If it starts in an enemy unit's ZOC and front arc, it must remain in that unit's front arc. It may not enter another enemy unit's ZOC. If it cannot meet all these requirements, it must move as far as it legally can, then halt and suffer a disruption (and casualty if already disrupted).

5.2.2.5 Retire Full Move. Disrupted

The unit MUST move away from the enemy until it has moved its full movement allowance. Obligatory retirement ignores all movement penalties for moving backwards or for crossing difficult terrain. If the unit hits impassable terrain such as a river, or cannot move away from the enemy, it halts and suffers a disruption (and casualty if already disrupted).

Disrupted Units use the "Disrupted Unit" column of the movement table, which are explained below.

5.2.2.6 Rally and full move

The unit removes its Disrupted marker and receives its full movement allowance.

5.2.2.7 Rally and half move

The unit removes its Disrupted marker and receives half its movement allowance.

5.2.2.8 Rally in place. No move

The unit removes its Disrupted marker but conducts no movement.

5.2.2.9 No rally. No move

The unit remains Disrupted and conducts no movement.

5.2.2.10 No Rally. Disrupted. Retire full move.

The unit suffers an additional Disruption (resulting in a casualty loss). The unit MUST move away from the enemy until it has moved its full movement allowance, ends facing the direction it moved. Obligatory retirement ignores all movement penalties for terrain. If the unit hits impassable terrain such as a river or friends it cannot

interpenetrate or cannot get further away from the enemy, it halts and suffers another disruption.

5.2.2.11 BROKEN - Remove from table

The unit has routed and is destroyed. It is removed from the table. The enemy is awarded Glory points for the unit being broken/destroyed, even if not directly caused by enemy action.

5.2.3 Terrain Effects on Command and Movement

The effects of terrain on movement are detailed below for each terrain type.

If any part of the unit starts its movement in Difficult Terrain, or if any part of its path is in one or more pieces of Difficult Terrain, its movement is halved. This means that for each 1" of movement in the Difficult Terrain, you use 2" of the movement allowance.

For each Linear Obstacle the path crosses (up a Steep Slope or across a Stream), deduct 2" from its move.

5.2.3.1 Hills Effect on Movement

Only steep slopes affect a unit's movement when its path ascends the hill. If a unit moves from a lower to a higher level, then it must pay a movement penalty of 2" for each level it ascends.

A unit that's already on a hill doesn't have to pay any additional penalty when it moves along the hill or crosses a contour to a lower level.

Gentle slopes have no effect on movement.

Impassable slopes are generally impassable going up or down. However, they may not be truly impassable to all troops. Units with Skirmish or Steep Slope terrain specialization ability may cross it on a move roll with a result marked with an *. Units with both Skirmish and Steep Slope terrain specialization pay 2" movement penalty for each impassable line crossed.

5.2.3.2 Watercourses Effect on Movement

A stream may be crossed anywhere and, in any direction, subject to a Movement penalty of 2". A unit may end its movement in the stream, but if any of the unit's front edge is touching the stream at the beginning of a Movement Phase, it must pay the 2" penalty again. Crossing multiple streams in the same movement phase will apply the penalty for each stream crossed. Moving along a stream, with the front edge continually touching the same stream, applies the penalty only once per movement phase.

Units with the Water special terrain attribute pay no penalty to cross or move along a stream.

Rivers and Lakes are impassable to most units except at a Bridge designated by the scenario (including bridges, causeways or fords). Artillery, Transport, Serudlá or units in The Serpent formation may use a Bridge without movement penalty. A unit in any other formation must pay a 2" movement penalty to cross, and if it does so, no other friendly unit may use the crossing that turn.

Built-Up Areas that straddle a Stream or River also count as a Bridge.

Units with the Water special terrain attribute may cross rivers as if they are streams (paying a 2" penalty). They may cross Lakes at ½ normal movement rate.

5.2.3.3 BUAs Effect on Movement

Villages have no effect on Movement.

Towns count as Difficult Terrain. If any base of a unit starts its Movement in a Town, the unit suffers a modifier of -2 from its Command Movement Roll. The unit may only move at half rate because of the Difficult Terrain penalty, as must any unit whose movement path enters a Town.

5.2.3.4 Fortifications Effect on Movement

All fortifications have some effect on movement, based on their cover value. Unoccupied fortifications with cover value of 1 may be crossed with a 2" penalty for combat units and are impassable for Artillery and Transports. Unoccupied fortifications with cover value of 2 may be crossed with a 4" penalty for infantry, but are impassable to artillery, carts, and wagons. Fortifications with cover value of 3 or greater cannot be crossed without the Sapper attribute.

5.2.3.5 Vegetation Effect on Movement

Crops have no effect on movement.

Woods and Marshes count as Difficult Terrain. If a unit starts its Movement in a Wood, the unit suffers a modifier of -2 from its Command Roll. The unit may only move at half rate because of the Difficult Terrain penalty, as must any unit whose movement path enters a Wood or Marsh.

Swamps are similar to Woods, but the penalty for movement is one quarter rate for combat units and impassable for Artillery and Transports.

Food of the Ssú is impassable to all but Ssú and Hlüss, who treat it as clear terrain.

5.2.3.6 Rough Ground: Effect on Movement

Rough Ground counts as Difficult Terrain. If any base of a unit starts its Movement in Rough Ground, the unit suffers a modifier of -2 from its Command Roll. The unit may only move at half rate because of the Difficult Terrain penalty, as must any unit whose movement path enters the Rough Ground.

5.2.3.7 Roads: Effect on Movement

Roads have no effect on the movement of units in any formation other than The Serpent, which may move along a road.

Movement along a road by Artillery, Transports or units in The Serpent formation moves 2" for every 1" of movement rate expended. Units may join or leave a road at any point during their movement. Thus, a column of infantry with a 12" movement allowance could travel 24" entirely along a road; or 3" cross-country, then 12" (costing only 6") along a road, then another 3" cross-country.

When traveling by road, a unit must be centered on the road and ignores the usual requirement for its movement path to follow a straight line.

While they are using road movement, units ignore all movement penalties for other terrain crossed by the road, including steep slopes, watercourses, BUAs and vegetation. A unit in The Serpent formation or Artillery or Transports on a road through difficult terrain do not suffer the Difficult Terrain -2 penalty on its movement roll.

Unless on a Sákbe road, Artillery, Transports and units in The Serpent formation may not move past each other on the same road. On a Sákbe road, two units in The Serpent formation may move either in parallel along the Sákbe road or may pass each other in opposite directions.

5.2.3.7 Open Country Effect on Movement

Movement across Open Country is at normal cost and with no Command modifiers.

5.2.4 Calculating Movement Distance

Flexible, Formed, and Limited units must follow a straight line throughout movement. The Movement Path for Nimble and Flexible units is 1" wide; for all others it is equal to the width of the unit.

A Nimble unit is allowed to make one change of direction at any point along its Movement Path. If the change of direction exceeds 45 degrees, it incurs a 2" penalty.

5.2.4.1 Formation Changes

Changing from one formation to another costs half of a unit's full movement allowance in the current formation. Thus, if a unit rolls a Half Move for Command, then it may either move half its normal move OR it may change formation. Formation change can be done at any point during the unit's movement. Facing of the unit is retained, unless it changes into or from a unit that has multiple front facings. Setting up Artillery and Lightning Bringer units from Transport takes a full move, instead of the usual half move.

When changing formation, the existing FCP of the unit remains the same in the new formation, including in the same facing.

If a unit that is entitled to half a move or a full move wishes to change facing but remain in the same formation, it may pivot about its FCP and treat this as a formation change.

A unit may carry out only one formation change per Command roll. This means, a unit that performs multiple Command rolls in a single phase due to magic may make multiple formation changes in the phase.

5.2.4.2 Direction of Movement

For all units, the movement arc is 45 degrees. Movement outside that arc is "outside the front arc" and incurs a 3" penalty. However, units may move directly backward at half move without changing their facing at the end of movement.

Nimble and Flexible units may face any direction at the end of their move. Others must face the direction of the movement path, unless moving directly backward a half move.

5.2.4.3 Armor, Skirmish, and Movement

Troops with None or Light armor move one class faster than their formation. Also, a Unit that has the Skirmish attribute moves one class faster. If they are None or

Light armor AND Skirmisher, then they move two classes faster. For example, unarmored archers in Blade of the Sword (normally Formed) would move as Flexible for all purposes. If those archers were also All Skirmishers, then in the Blade of the Sword they would move as Nimble. This does not apply to Stationary formations.

5.2.5 Group Moves

Certain collections of units may move together with a single Command roll. These represent units that are trained to operate in close concert, such as the two wings of a Tsolyáni legion, the units of a Yán Koryáni Gúrek or of a Salarvyáni Nchësh. Such closely associated units may move as a group if they are within 1" of another unit of the group. The group is identified and the Command roll made. All the units of the group are subject to the results of the roll. They must also all perform exactly the same movement and retain their relative positions to one another.

5.2.6 Movement of Heroes, Commanders, and Magic Users

Heroes, Commanders, and Magic Users move during the Command & Movement phase, along with other units. If they are attached to a unit then they move with that unit. If they are not attached to a unit then they move individually as Nimble units. They never make a command roll and always have a Full Move. They may not move both individually and attached to a unit in the same Movement phase. This means, for example, a Hero may not move to attach to a unit and then move with that unit later in the phase.

5.3 Movement – Zones of Control (ZOC)

All combat units have a ZOC which extends 3" from their base edges in all directions. Heroes, Commanders, and Magic Users do not exert a ZOC.

A unit's ZOC is temporarily negated if an enemy unit moves into base contact with it. It is restored as soon as the unit is no longer in base-contact with the enemy.

If a unit's Movement path starts in or enters an enemy unit's ZOC, the path must point directly at or away from the enemy unit.

If the path starts in or enters more than one enemy ZOC and is in the ZOC of a unit in the moving unit's front arc

from its FCP, it must point directly at or away from the nearest enemy unit in the moving unit's front arc from its FCP.

If the path starts in more than one enemy ZOC but none in the moving unit's FCP's front arc, it must either:

- Move directly towards one of the enemy units in ZOC; or,
- Move so that no point of its path is closer to any of the enemy units in ZOC than where it starts.

The ZOC of units of Skirmishers with None or Light Armor only affect other Skirmisher Units with None or Light Armor. Heavier and non-Skirmisher units may ignore these ZOCs.

5.4 Movement – Formations

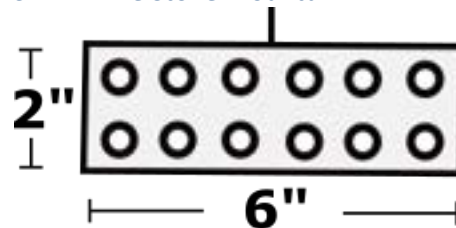

Armies of the Five Empires utilize many varied formations. Generally, all of the armies are extremely well drilled and capable of complex maneuvers, compared to the armies of ancient Earth. The armies of the various nations have preferences for different formations.

5.4.1 Formation Effects

Formations are a central aspect of **Legions of Tékumel**. A unit's current formation determines its Movement Type (Nimble, Flexible, Formed, Limited, Stationary) and may also modify the Command roll. In addition, some formations can affect shooting, both as the shooter and as the target; these are reflected in shifts to the right or left on the Combat Chart. Likewise, the can affect the units Charge and Melee ability with shifts Right or Left.

The various formations are shown below. The combat effects are shown on the Formation Cards and the Formation Chart

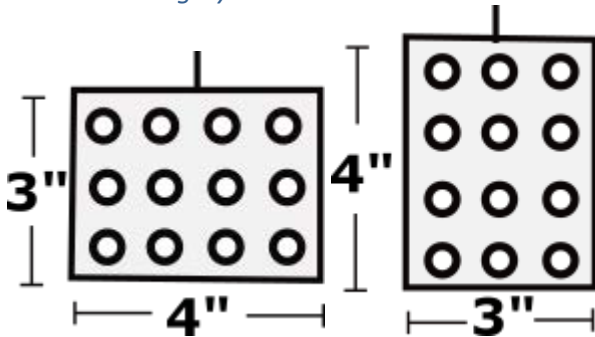

5.4.1.1 The Stone Mountain

This consists of a phalanx (or body of other types of troops) in a horizontal rectangle. This is especially favored for pikemen, spearmen, halberdiers, or even

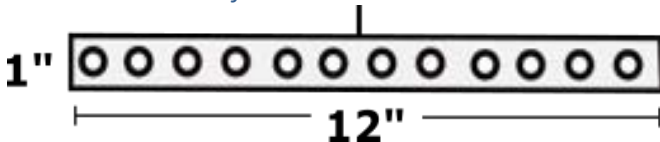

swordsmen. It is employed by all of the nations of Tékumel.

5.4.1.2 The Mighty Block

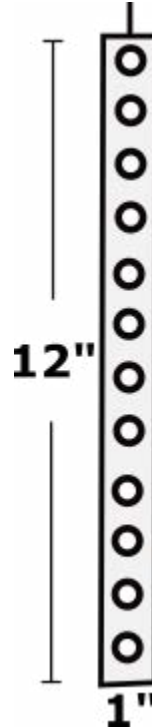

This is a body of heavy or medium troops organized in a solid square or a long rectangle. Pikemen gain particular advantage from this formation, but other units may use it to concentrate more troops in a shorter frontage than the Stone Mountain. There are no particular limitations on the numbers of men in the ranks or in the files. All the nations of Tékumel make use of this deployment. In **Legions of Tékumel**, it is represented by a base that is 3" by 4". The front of the unit can be either the long or short side, which must be decided when the unit is deployed or a formation change is made. A formation change is required to change the frontage of the unit, even though it is retaining the same formation.

5.4.1.3 The Blade of the Sword

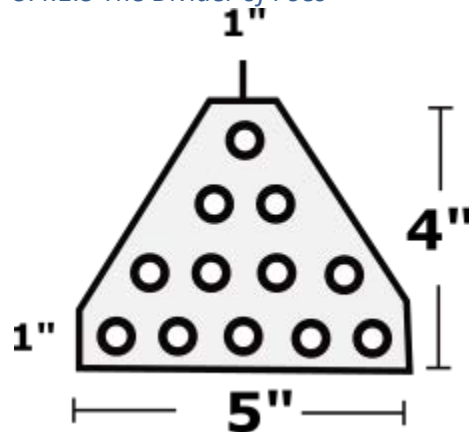

This is a formation consisting of one, two, or three ranks of men in lines. It is frequently used for skirmishers and missile troops, as well as for the deployment of medium or heavy troops to extend the frontage. Light skirmishers move easily in this formation, but heavier troops have more difficulty maintaining a coherent line.

5.4.1.4 The Serpent

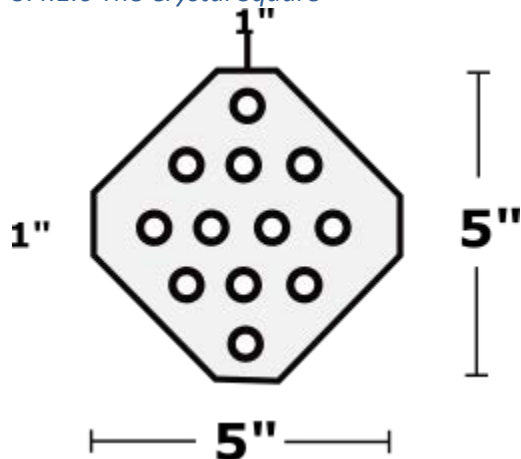

This represents a unit closed up into march columns that are most efficient for moving troops rapidly along roads, but not an effective combat formation. No shooting to the front is allowed, however, troops may shoot to either flank or both flanks with the appropriate shifts.

5.4.1.5 The Divider of Foes

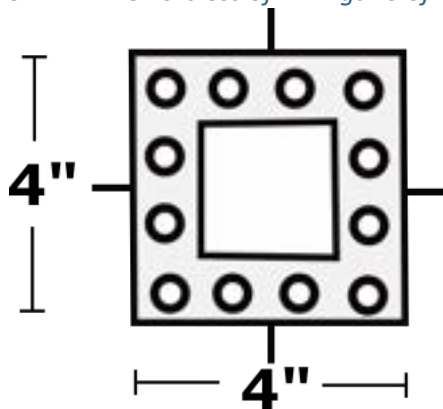

This is the wedge, favored by the Livyáni and also a component of many other formations. The Divider of Foes cannot support other units to its front, but it may be supported. It converts to Mighty Block at the end of Charge Combat if in contact with the same enemy unit and did not pursue.

5.4.1.6 The Crystal Square

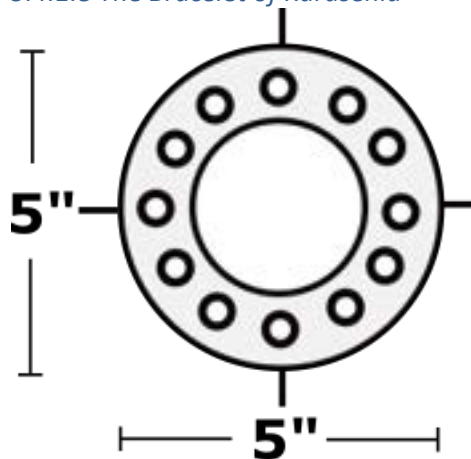

This is a diamond-shaped wedge. This is also popular with the Livyáni, but it is used by many other nations as well. The men in the rear are often trained to fight facing away from the front, so that this formation has no real flanks. During a turn in which the unit has not moved, it has no flanks and can fight and shoot in any direction. It converts to Mighty Block at the end of Charge Combat if in contact with the same enemy unit and did not pursue. The Crystal Square cannot support any other units, nor may it be supported.

5.4.1.7 The Fortress of Milingáno of Vrá

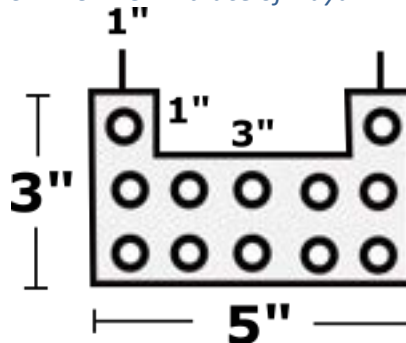

This is a hollow square. Men in the sides and rear of this formation are trained to fight facing directly outward, and this deployment thus has no flanks or rear. It moves at a slower pace than purely forward-facing formations, of course, but it is sometimes used to escort a commander or a group of priests away from a pursuing foe. Only the Yán Koryáni are really skilled in maneuvering in this pattern, although other nations use it as well.

5.4.1.8 The Bracelet of Kurusénla

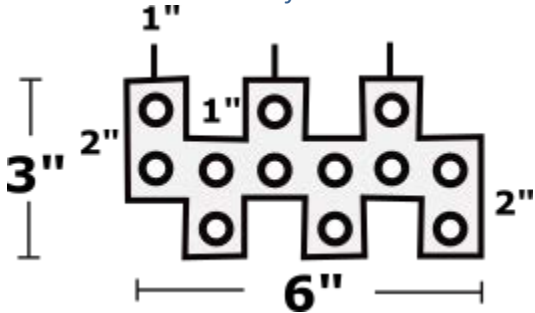

This is a hollow circle, named after an ancient queen of the time of the Dragon Lords. It is used primarily by troops who are surrounded and who would rather die in place than be taken for sacrifice. It is employed by all of the peoples of Tékumel and is a favorite defensive posture of the Pé Chói.

5.4.1.9 The Embrace of Nayári

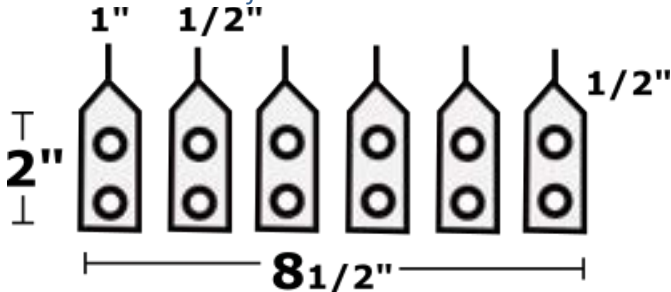

This formation may be used by a phalanx or by other troop types. It consists of a solid rectangle with two forward-projecting "arms" which are used to outflank or to penetrate into an enemy unit. The Tsolyáni have developed this deployment to a fine art and can shorten or elongate the "arms" as needed. The Mu'ugalavyáni, Salarvyáni, and Yán Koryáni also use this pattern occasionally with some success.

5.4.1.10 The Garment of Idéssa

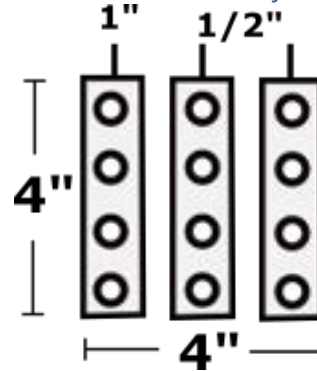

This is a checkerboard pattern, used by heavy and medium troops of all Tékumel's nations. This requires prior training, of course, but many good units are taught to change from the Stone Mountain into this formation, then back again or into some other pattern. It may be noted that on those rare occasions when the Ssú have fought pitched battles, they have adopted checkerboard patterns. A unit may automatically convert to the Stone Mountain after Charge Combat, if still in contact with the enemy. The representation of this formation is somewhat simplified in LoT, as shown above.

5.4.1.11 The Teeth of Krá

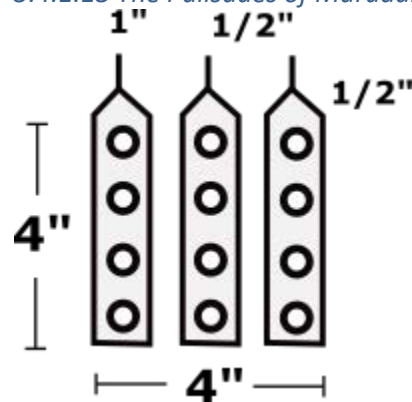

This formation consists of small wedges followed by squares in staggered rows or in columns. It is used by all of the armies of Tékumel, although the Mu'ugalavyáni do not favor it. A unit may automatically convert to Stone Mountain at the end of Charge Combat if in contact with the same enemy unit. The representation of this formation is somewhat simplified in LoT, as shown above. The separate columns are separated by about 1/2 inch.

5.4.1.12 The Towers of Púrdanim

This is a series of columns. A solid line or phalanx is often opened out into this pattern in order that missile troops can run forward, fire, and retreat. The Tsolyáni have also trained heavy Shen mercenary units to race forward through these gaps and then reform into a solid phalanx just in front of a surprised enemy. Mu'ugalavyáni generals also favor this pattern, and other nations of Tékumel also use it but less frequently. It should be noted that this is a pre-contact formation, and a unit is rarely ordered to hit the enemy line in this pattern. A unit may automatically convert to Mighty Block at the end of Charge Combat if in contact with the same enemy unit. The separate columns are separated by about 1/2 inch.

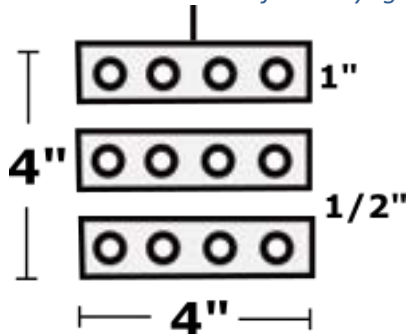

5.4.1.13 The Palisades of Murudáni

This is similar to the preceding deployment. Each column has a wedge-shaped end, however, and each such sub-unit is ordered to advance and strike the enemy line semi-independently. These columns then function as long wedges initially; after contact has been made, the troops from the rear of each column are trained to wheel to the left or right upon a signal and engage the enemy between the "teeth" of the palisade. This is a common Yán Koryáni formation, but it is not much used elsewhere. A unit may automatically convert to Mighty Block at the end of Charge Combat if in

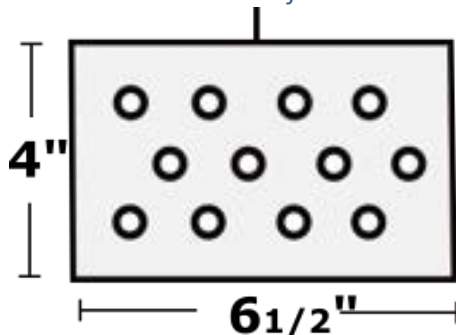

contact with the same enemy unit. The separate columns are separated by about ½ inch.

5.4.1.14 The Waves of Chanayága

This is a series of lines with spaces between them. This is a common formation everywhere for light troops, missile troops, and other troop types in open order. Orders can be given to this pattern to close up into the Stone Mountain formation or to regroup into the Garment of Idessa. A unit may automatically convert to Stone Mountain or Mighty Block at end of Charge Combat if in contact with the same enemy unit **and did not pursue**. The ranks are separated by about ½ inch.

5.4.1.15 The Meadow of Death

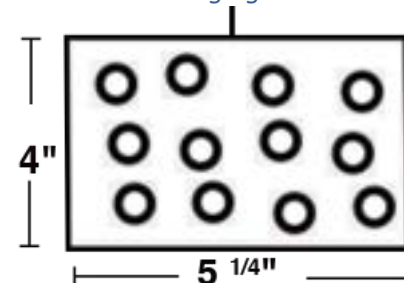

This formation consists of two interpenetrating units trained to work together: a unit of medium troops (usually halberdiers, axemen, or two-handed swordsmen) is interspersed with a unit of missile troops. As the two units advance in open order, the missile troops fire, while their comrades cover them and themselves with their shields. When contact is made with an enemy unit, the missile troops run back through the ranks and form up again elsewhere, preferably at a spot from which they can still pour fire into the rear ranks of the foe. If need be, these missile troops can also be ordered to run around to the rear of the engaging enemy unit and hack at its rear ranks with short swords, axes, etc. This is a typical Yán Koryáni formation, since the missile unit is often composed of the younger sons, wives, and daughters of the

halberdiers, swordsmen, etc. Other nations use this type of formation sparingly, although interpenetration of units in open order is not uncommon, and some special units are indeed used by various nations which consist of more than one troop type.

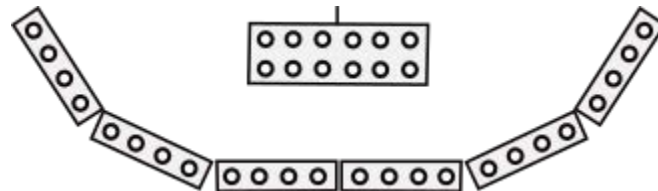

The effects of this formation are somewhat abstracted in **Legions of Tékumel**. The missile troops provide the shooting factor and are considered to act as local commanders deem best when fighting in close combat.

5.4.1.16 The Stinging Swarm

This formation is used for irregular skirmishers, poorly trained levies of all sorts, and flying Hláka units. In these cases, it simply represents a swirling mass of troops loosing their missiles at the best opportunity. It is not as good for shooting as the Blade of the Sword formation, but it is more compact and easier to command. All skirmisher troops consider this to be a Common formation, regardless of their nationality.

5.4.1.17 The Two Moons

This is essentially a positional defensive stance. It consists of a large semi-circle of troops with a smaller and more compact semi-circle in the center. If the two flanks can be anchored against suitable terrain features (e.g. the walls of a mountain pass), this formation is a difficult one to overcome. Sa'alúr also lists this as a defensive army formation, calling it the "Pupil of the Eye," and suggests that the outer semi-circle be composed of lighter troops (preferably with missiles) and the inner one of a dense body of heavy infantry. This deployment is used by many nations, including the smaller ones (e.g. the Ghatóni, Pijjenáni, N'lüss, etc.). It was also adopted by the ill-fated Gurék of the White Sun, a Yán Koryáni unit, when it was trapped by a

greatly superior force of Shunned Ones at the base of Pachalím Cliff in 1,783 A.S. Although the Yán Koryáni were eventually slain to the last warrior, they managed to slay nearly triple their numbers of Shunned Ones.

This formation is stationary. It is usually composed of three units, which are considered one for Command purposes while in this formation. The units of the outer semi-circle may shoot over the central unit at any enemy that is at least 1" away from the central unit, if in range.

5.4.2 Artillery and Transport Movement

5.4.2.1 Artillery

Light Artillery are moved by hand, usually carried in pieces by the artillerists and other soldiers or slaves detailed to assist. They move as Limited Movement type and cannot shoot in the turn they move. They may pivot after being set up.

Heavy Artillery and Large Lightning Bringers not in wagons cannot move but may pivot.

Lightning Bringers may be Small or Large. Their combat effects are the same, but the Large can only be moved in wagons, while the Small version may be moved in carts (or they have their own wheels and can be pushed/pulled).

5.4.2.2 Transport: Carts

Light Artillery and some Lightning Bringers may be moved in hand drawn/pushed carts. They are Formed Movement type. Shooting factors are halved if the Artillery cart moves half or less or pivots and shoots in the same turn. If it moves more than half, it cannot shoot.

5.4.2.3 Transport: Wagons

Wagons are drawn by Chlén beasts and are used to transport Heavy Artillery and Large Lightning Bringers. They move as the Formed Movement type. The weapons must be removed from the wagons and set up to shoot (or at least the Chlén beasts unhitched and the wagon stabilized). It takes a full move to set up the Heavy Artillery, and they may not shoot in the turn they set up. Once set up, they cannot move again but may pivot.

5.4.3 Crooked Formations

All units, including those in the Blade of the Sword, must keep the front edge in a straight line. They may not have bases angled forward or back from this line.

However, a unit in The Serpent formation is allowed to bend its formation to follow a road.

5.4.4 Group Moves

Closely associated units, such as the two flanks of a Tsolyáni legion or units of a single Yán Koryáni Gurék, which are within 2" may make a combined move with a single die roll. When conducting the move, the units move as a single unit, considering their entire frontage for the determination of the FCP of the unit. The group move must be declared before making the Command roll. The units must perform the same action and maintain the relative position to one another.

5.5 Movement into Contact

If a unit's movement path contacts any point on an enemy unit's base edge, it may move into contact with the enemy and attempt to initiate a Charge. The path must comply with the restrictions on movement through enemy ZOCs.

A unit may not end its movement in contact with an enemy unit unless its FCP contacts the enemy. In other cases, it must halt 1" away from the enemy, unless another friendly unit is already in contact with the target unit.

The Charging unit must line up in edge-to-edge contact with the target unit. If any part of it started its movement in the enemy's front shooting arc, it must line up on the enemy's front edge, with its FCP in contact with the enemy. Otherwise, it may line up with either of the edges facing it. If it lines up with a flank edge (not the rear edge) it may align so that it does not project into the enemy's front (shooting) arc, even if this means its FCP is no longer in contact. Nimble units, which 'doglegs' around a flank, may line up on the flank, but still does not count as a Flank Charge (and so does not cause the target unit to be Disrupted), but the following Melee Combat may be a Flank melee (granting column shifts in close combat) if the defending unit is not able to move to change facing.

If another friendly unit in Line has already-contacted an enemy unit's edge, the moving unit may line up behind the first friendly unit to offer Rear Support (depending on its formation). Alternatively, if the moving unit can reach a corner of the target unit, it may line up on the flanking edge instead.

If the first friendly unit does not cover the whole of the edge it contacts, then so long as it has space to contact with its FCP, the second friendly unit may choose instead to line up alongside the first, rather than behind it.

If a unit has failed to move (rolled a command result of No Move), but ends up displaced by another friendly unit in such a way that the moving unit is in a Combat and the displaced unit is lined up immediately behind it, then the displaced unit is NOT involved as Rear Support; instead, push the displaced unit back a bit more so that it is not in contact with the charging unit so that there will be no confusion.

Artillery, wagons, magic users, heroes, and command may be the target of a Charge but may not initiate a Charge.

5.5.1 Contacting multiple enemy units

If a unit moves into contact with the enemy in such a way that it cannot be lined up without also contacting or overlapping another enemy unit or units, then it must charge all the contacted units.

If a unit moves into contact with the enemy in such a way that it could be lined up without contacting or overlapping another enemy unit or units, but there is another enemy unit or units it could contact if pivoted by up to 45° after lining up, then it may contact and Charge all the contacted units if it wishes. In this case it need not line up precisely edge to edge.

5.5.2 Evade Moves

If a unit moves within 6" of an enemy Skirmish unit that is in Good Order, the moving player should ask whether the enemy unit wishes to evade. An eligible unit (Skirmish and in Good Order) that would be contacted by a pursuing unit may also evade. The evading unit immediately makes a Command roll and may make an Evade Move, if allowed by the results.

An Evade Move is at least half the unit's normal movement allowed by the Command roll, and can be up to its full allowed movement, at the owning player's option. A unit in Good Order that rolls 9 or higher must make the Evade move, rather than recovering a lost figure.

The evading unit must move away from all enemies within 6" at any point of the path of its Evade Move.

During the Evade Move the evading unit becomes Disrupted. Evading units consider terrain effects.

The moving unit that caused the Evade Move may continue its move beyond the potential point of contact so long as it has Movement Allowance remaining and continues to obey normal movement restrictions.

Units that evaded may shoot in the Defensive Shooting phase either before or after they evade, if they have targets. Evading units that shoot are considered Disrupted.

A unit may only Evade once in a movement phase.

5.5.3 Movement and Close Combat

5.5.3.1 In Close Combat

Units that are in close combat during the movement phase, MUST make a Command roll, even if they are not Disrupted. Any result that includes the asterisk (*) allows the unit to break off from the enemy. A break off move is a special move up to $\frac{1}{3}$ the unit's normal move straight back away from the enemy with which they are in contact while retaining the original facing. Supporting units are moved back up to $\frac{1}{2}$ of their movement. If the unit contacts any impassable terrain or friendly units not already in support, it must halt. It also may not contact an enemy unit, nor may it move into or through another enemy ZOC. If it is in contact with an enemy from multiple directions, it may not break off.

5.5.3.2 Retire from Close Combat

Units that are forced to retire as a result of close combat move directly away from the enemy they are fighting. The defeated retiring unit moved directly away from the enemy without changing its facing. In the case of multiple units moving from a single combat, the owning player decides the order of their movement.

If a unit cannot complete its flee move because it contacts impassable terrain, friends it cannot interpenetrate or displace, or enemy units then it halts. Units that are not able to move at least 1" suffer a Disruption.

5.5.3.3 Flee from Close Combat

Units that are forced to flee as a result of close combat move directly away from the enemy they are fighting. The unit turns its rear toward the enemy and then moves directly away. In the case of multiple units moving from a single combat, the owning player decides the order of their movement.

If a unit cannot complete its retire move because it contacts impassable terrain, friends it cannot interpenetrate or displace or enemy units, it halts. Units that are not able to move at least 1" suffer a Disruption.

5.5.3.4 Pursuit

After close combat, if all enemy units have retired, fled, or broken, a unit must immediately make a Command roll. For some combat results, if the winner's Command result has a *, then it must pursue. If there are multiple units on the winning side, they roll Command independently.

5.5.3.5 Rear Support

Units may offer Rear Support to friendly units that are directly in contact with the enemy and engaged in close combat. Support is granted when the front of the supporting unit is in contact with and parallel to the rear of the supported unit. At least half of the supporting unit must be in contact with the rear of the supported unit. (Thus, a single unit may only support two friends at most.) The Rear Support units do not include their Charge or Melee factors, but offer a column shift instead.

Supporting units do not suffer the results of a loss. However, if allowed, they may be displaced backward by the losing unit up to ½ move. If allowed, the losing unit may interpenetrate and pass through the supporting unit to its rear. If the supporting unit cannot be interpenetrated nor displaced, then it stands and the losing unit cannot make it retire or flee movement, causing Disruption.

Units in Rear Support only suffer casualties if the supported unit is Broken for any cause, in which case the unit in Rear Support suffers one casualty and is Disrupted.

Only units in Blade of the Sword, Stone Mountain, and Mighty Block may offer Rear Support. The Crystal Square, Fortress of Milingáno of Vrá, Bracelet of Kurusénla, Two Moons and Serpent cannot benefit from Rear Support. Pikes in the Mighty Block are "self-supporting" and may also receive Rear Support from a friendly unit.

5.5.3.6 Flank Support

Sometimes it may occur that a friendly unit is already in contact with an enemy unit making it impossible to contact that unit with the FCP. In this case, the moving unit may contact the enemy with some portion of its

front edge and offer Flank Support to the friendly unit that is already in close combat. Flank support is allowed on both the right and left flanks of the friendly unit(s) and provides a 1R shift for each supported flank. Corner to corner contact with the enemy does allow Flank Support.

If they are in more than corner to corner contact with the enemy, units offering flank support suffer the same combat results as the friendly unit they are supporting. If the flank support units are only in corner-to-corner contact with the enemy, then the supporting units are not affected by the combat results.

5.6 Movement – Special Situations

5.6.1 Interpenetration

Nimble units may move through other friendly units in any direction and be passed through by any friendly units.

Flexible units may move through other friendly Nimble or Flexible units that are facing the same or opposite direction.

Flying units may pass over any other units and through other friendly flying units with no restrictions.

Units that lose a combat and Flee burst through their friends and if not normally allowed to interpenetrate them, then cause the burst through units to be Disrupted.

No other penetrations are allowed.

5.6.2 Overlapping and Displacing Units

Movement of units may in some cases result in an overlap, that is, one unit ending its movement in the same space as another friendly unit.

Slower units may displace units of the same movement allowance or greater. For example, a Formed unit with movement of 6" may displace Formed, Flexible, and Nimble units, but not Limited or Stationary. Skirmish units may never displace non-Skirmish units.

If a unit moves and interpenetrates a friendly unit ending its movement atop the interpenetrated unit, the non-moving unit, if allowed, may be displaced back away from the enemy until it is no longer overlapped, otherwise the move may not be made. For instance, a fresh unit that is allowed to interpenetrate and displace a friendly unit could advance and take over the position

of a spent and disrupted unit, even if the latter has had a "No move" result from its own Command roll.

A unit in Close Combat may not be displaced out of contact with the enemy in this fashion. Instead, a unit in Close Combat must make a Command roll and successfully disengage during its normal movement. Only then could a friendly unit move and displace the unit that had been in Close Combat.

If a unit retires away from the enemy - either in its own movement phase, or as a result of close combat - and ends atop another friendly unit, then either the

overlapped unit may be displaced backwards to make space for the retiring unit to complete its retirement, or the retiring unit may itself be displaced by continuing to retire until it no longer overlaps.

Any displacement must be in the direction that results in the unit being displaced the minimum distance while still being displaced away from the enemy.

Units in the Serpent formation may not displace or be displaced.

Units may never overlap and displace an enemy unit.

6 Combat Resolution

Combat – shooting and close combat – is resolved using the Combat Results Chart and a D20 roll. Shooting for each side is performed in the appropriate Defensive or Offensive Shooting Phase, and so is never simultaneous.

Close combat, Charge and Melee, however, is considered simultaneous. So, while players may alternate rolling for results, they are not applied until after both sides have rolled.

COMBAT RESULTS

Factor = Sum of Shoot or Close Combat for each side.

Roll On D20

	1	2	3	4	5	6	8		10	12	15	18	21	24		28	32	36	40	45	50+

D: All units suffer Disruption. If already disrupted, lose a casualty and halt.
 1: All units lose 1 base, are Disrupted, and Halted.
 2: All units lose 2 bases, are Disrupted, and Halted in Close Combat, otherwise Retire 1/2 Move retaining original Facing.
 3: All units lose 3 bases, are Disrupted, and Halted in Close Combat, otherwise Retire Full Move Facing direction of move.
 4: All units Broken. All others 3 hits and Disrupted and retire Full Move from Shooting, Halted in Combat.
 5: Trained and Raw units Broken. All others 3 hits and Disrupted and retire Full Move from shooting or Halted in combat.
 6: Veterans, Trained and Raw units Broken. Those suffer 3 hits and Disrupted and retire Full Move from shooting or Halted in combat.
 7: All units Broken.

6.1 Combat Resolution Method

For all combats follow these steps:

1. Determine which enemy unit is the target and declare all the units participating in the attack.
2. Find the factor for the type of attack (Shooting, Charge, or Melee) for each participating unit.
3. Apply any applicable multipliers to the attack factors. There may be different multipliers for each unit. Modifiers are applied in the order they are presented on the chart.
4. Add together the modified factors of all the attacking units.
5. Locate the appropriate column on the Combat Result Chart, rounding up to the next column if there is not an exact match.
6. Apply modifiers that shift the columns left or right. Apply all shifts in the order they are presented on the chart. If right shifts would take you beyond the 25+ column, then they are lost. Shifts left are applied if any unit suffers from them. Shifts right are only applied if at least half the units qualify. The same shift is only applied once.

- Roll a D20. Cross index the roll with the column after shifts are applied to get the result.
- Apply results.

6.1.1 Target Units

During the shooting phase, the shooting player nominates the target unit and declares all the units that will attack it. After the D20 roll is made for shooting, no other units may shoot at that target unit in the current phase.

In close combat, all the units that are touching common enemy units are considered in one combat. Their factors are all added together and there is one D20 roll for each side in that combat.

Magical attacks are rolled separately from shooting and close combat.

6.2 Combat Results

The Combat Results Chart displays the results in a cell with a number or letter and a color code. The color of the cell indicates the morale effect on the target unit. The full results are explained below.

Disrupted - Any result other than a blank cell means the target unit is Disrupted. If there are multiple target units (in close combat), then they are all Disrupted. If the target unit is already Disrupted, then it will suffer an additional casualty.

Halted - Any casualty results in the unit being Halted. The non casualty results depend on the target unit's Quality. R means that only Raw units are Halted. T means that Trained and Raw are Halted. V means that Veteran, Trained and Raw units are Halted. E means that all units are Halted. Units that are Halted in the Defensive Shooting Phase halt at the point at which they were shot, and if they were charging the charge is canceled. Halted in Close Combat is ignored by the winners. If there are multiple target units, then this result applies to all of them. Additional results may be applied for units in close combat.

Retire ½ Move - Units that suffer this result and are NOT in close combat retire ½ move directly away from the nearest enemy. If the nearest enemy is in their front, then they retire directly to their rear. If the enemy is not to the front, then the unit faces the nearest enemy and retires. If there are multiple

affected units, then this result applies to all of them. Additional results may be applied for units in close combat.

Flee - Units that suffer this result and are NOT in close combat turn away from the nearest enemy and move directly away. If the nearest enemy is in their front, then they flee directly to their rear. If the enemy is not to the front, then the unit faces the nearest enemy and flees. If there are multiple affected units then this result applies to all of them. Additional results may be applied for units in close combat.

Broken - Unit is destroyed and removed from combat. If there are multiple affected units, then this result applies to all of them.

1, 2, 3 - The cells with numbers represent casualties suffered, tracked by figures removed from the unit, or marked off for some special units, like Serudlá, commanders, Heroes, and Magic Users. If there are multiple target units, then distribute the casualties as evenly as possible. If there are more units than casualties, apply first to units that have the most contact with the enemy in close combat.

7 Shooting

7.1 Shooting – General Procedure

Shooting occurs in two phases: the Defensive Shooting Phase, in which the non-moving player may shoot once with each of his eligible units; and the Offensive Shooting Phase, in which the moving player may shoot once with each of his eligible units.

To conduct shooting, the player whose shooting phase it is indicates an enemy unit he wishes to target. He then indicates all the units of his own with which he wishes to shoot at that target: - checks' the ranges; calculates the combined shooting factors for all units shooting at the one target, applying any relevant shooting multipliers or column shifts; and rolls a D20 to resolve the effect of his shooting. This is repeated until each enemy unit the player wishes to target has been shot at once. In multi-player games, all players on one side may resolve their shooting simultaneously, but each enemy unit may still only be shot at once.

7.1.1 Target Eligibility

In the Defensive Shooting Phase, an enemy unit that moved, including changing formation, limbering/unlimbering, pivoting or changing facing, may be shot at any eligible point in the path of the move it has just completed in the Movement Phase. A unit that did not move may be shot at in its present position.

In the Offensive Shooting Phase, an enemy unit may only be shot at in its present position.

A unit may only be shot at once per phase. If, after rolling his dice to resolve shooting against a unit, a player realizes he wished to add another unit of his own to those shooting at the target unit, he may only do so if the forgotten unit has no other eligible target remaining **and if his opponent consents**. In that case the shooting factors are recalculated but the original die roll is kept - the dice are not re-rolled, unless his opponent consents.

Eligibility is measured from the front center of the shooting portion of the unit. To be able to shoot, a unit need only have LOS from any point on its own front edge to any point on the target base. This line must be entirely in the shooter's 90-degree arc of shooting, i.e.,

up to 45° left or right of directly to its front, as measured from its front corners.

7.1.1.1 How Many Shooting Factors

To determine whether the unit may shoot, use the 90° arc at the center of the unit. If some portion of the target is within that arc, then the entire unit may shoot with all its factors. If the target is outside the arc, you may decide to choose another target within the arc or shoot with only a half of the unit.

7.1.1.2 Line of Sight

LOS may be blocked by terrain per the terrain table. LOS is also blocked by other units, whether friendly or enemy. Shooting over units may be possible in some circumstances (see the Terrain section).

Note that because Defensive shooting occurs at any point during an enemy unit's movement, line of sight to a target unit during Defensive shooting is only blocked by other enemy units if they blocked it for the whole of their immediately preceding Movement Phase, otherwise, the shooting is considered to have taken place before the blocking unit had completed moving into its new position. The only exception to this is that a unit that has contacted the shooter does block LOS.

Commanders, Heroes, and non-combat Magic User do not block LOS.

7.1.2 Shooter Eligibility

A player may normally choose to shoot at any target unit he wishes. A unit may split its shooting as explained below and may shoot at any eligible target(s) within range according to the Shooting Ranges table.

Weapon Ranges	
Strongbow, Heavy XB	12
Crossbow	9
Bow, Pistol XB, Sling	6
Javelin, Blowgun	3
Fire Pots	1
Lt Artillery	15
Hvy Artillery	24
Lightning Bringer Artillery	36

The only exception is that, when a unit is involved in a Charge, it may only shoot at the unit they are charging or being charged by, if able to do so.

7.1.3 Calculating Shooting Factors

For each unit shooting at a given target unit, determine the number of shooting factors that are to be applied and then measure the range from center of the front edge of the shooting portion of the unit to any point on the target unit. Then find the appropriate Shooting Factor from the Combat table.

Apply all relevant multipliers from the Shooting Multipliers table as appropriate for each shooting unit. Then add up all the various factors from the shooting units.

Shooting Modifiers	
Spent	x0.5
Art/Hvy XB* Moved	x0.5

*Except Shén with Heavy Crossbow do not suffer this modifier.

Multipliers are cumulative, so e.g., a unit that is both Spent and Artillery that moved has its Shooting Factor quartered.

If Artillery or Lightning Bringers in carts moved more than half a move, they may not then shoot in the Offensive Shooting Phase of that turn. However, they may move up to half or pivot in place and then shoot with half shooting factor, as these actions are equivalent to half a move.

Various tactical factors may then result in applying - "column shifts" that make the shooting more or less effective according to the Shooting Column Shifts table.

Shooting Column Shifts	
Shooter is Disrupted	2L
Shooter formation	varies
Target formation	varies
Target in cover	varies
Target defense	varies

7.1.3.1 Splitting Shooting

It is allowed to split the shooting in half. In this case, divide the frontage of the unit into left and right halves. The FCP for shooting is then the center of each half. Measure from that point. Half the shooting factors, rounded down, may be applied to each half of the shooting.

Some unit formations only allow a portion of the shooting factors to be applied in a particular direction. For example, the Fortress of Milingáno only allows ¼ of the factors to be shot from each side. These limitations are noted in the formation descriptions.

7.2 Terrain Effects on Shooting

Terrain, such as woods, towns, fortifications, etc., have various effects on visibility and shooting. The effects are detailed below.

7.2.1 Hills: Effect on Visibility and Shooting

A unit on a hill can see and be seen in all directions, except for when the line of sight (LOS) is obstructed by a terrain feature or its own steep slope.

The gentle slope of a hill does not affect the LOS of units onto or off the hill.

A steep slope contour blocks LOS between units if the lower unit is closer to the slope than the higher unit. This is known as the "dead zone."

LOS from a unit on an L1 hill to a unit on LO is blocked by an intervening L1 (or L2) terrain feature.

LOS from a unit on a hill to a unit on another hill is not blocked by another terrain feature of the same height but is blocked by a higher feature.

LOS from a unit on L2 down to LO is blocked by an L1 feature if the higher unit is further than the lower unit is from the contour or terrain feature edge nearest to the lower unit

Hills have no effect on shooting other than blocking LOS.

In certain instances, shooting over a friendly unit is allowed. If the shooter and the target are both on a higher level than the intervening friendly unit, LOS is not blocked. If the shooter and the friendly unit are on the same level, and the target unit is on a higher level, and the friendly unit is at least 3" from both shooter and target, the friendly unit does not block LOS.

If the target and the friendly unit are on the same level and the shooter is positioned on a higher ground, the friendly unit does not block the LOS if it is more than 3" from the shooter or target. Additionally, if the friendly unit is out of LOS of the shooter (for instance, because it is in the dead zone of a steep slope, or beyond 3" into a certain terrain) then it does not block LOS.

7.2.2 Watercourses: Effect on Visibility and Shooting

Shooting against a unit crossing a Bridge receives the shift for shooting at a unit in The Serpent formation shift on the combat table. Otherwise, watercourses have no effect on visibility or shooting. However, there is frequently foliage that may have an effect.

7.2.3 BUAs: Effect on Visibility and Shooting

A Village has no effect on visibility and is effectively 'transparent' in game terms.

Visibility into or within a Town is limited to 3". If the LOS between units crosses more than 3" of a single Town, or crosses into and out of the same Town, LOS is blocked.

A Town is considered to have the same height as a Level 1 Hill. It may therefore block LOS and prevent fire over it in the same way that Hills do (see 3.1.2). Even if a higher unit can see over a Town, the 3" LOS restriction within it still applies, i.e. a unit on a hill cannot see a unit hiding more than 3" from the front edge of a Town, even though the higher unit can overlook the Town and see units beyond it.

If at least half of the area of a unit is within the BUA, then it may claim cover from shooting.

Shooting against units in a village receives 1 Left shift on the Combat table.

Shooting against units in a town receives 2 Left shifts on the Combat table.

7.2.4 Fortifications: Effect on Visibility and Shooting

Fortifications with cover value 1 or 2 have no effect on visibility.

Fortifications with cover values of 3 or greater have the same effect on visibility as towns.

A unit occupying a Fort (not barricade, entrenchments or fortified walls) has a 360 degrees arc of fire. It may fire in any direction regardless of the direction it is facing.

Shooting against a unit behind barricades receives 1 Left shift on the Combat table.

Shooting against a unit in an Entrenchment receives 2 Left shifts on the Combat table.

Shooting against a unit occupying a Fort or on Fortified Walls receives 3 - 5 Left shifts on the Combat table.

A unit in a Fort cannot be attacked with Flanking shooting.

Shooting from flying units does not suffer the Left shifts for cover unless the fortifications have overhead protection.

7.2.5 Vegetation: Effect on Visibility and Shooting

Marshes have no effect on visibility or shooting.

Visibility Into or within a Wood, Swamp, or Crops is limited to 3". If the LOS between units crosses more than 3" of a single Wood, Swamp, or patch of Crops, or crosses into and out of the same Wood, Swamp, or Crops, LOS is blocked.

Woods, Swamps and Food of the Ssú are considered to have the same height as a level 1 Hill. They may therefore block LOS and prevent shooting over it in the same way that hills do (see 3.1.2). Even if a higher unit can see over a Wood, the 3" LOS restriction within it still applies, i.e., a unit on a hill cannot see a unit hiding more than 3"-from the front edge of a Wood, even though the higher unit can overlook the Wood and see units beyond it.

Crops only block LOS between units on the same level.

If at least half of a unit is within Wood, Swamp, Crops or Food of the Ssú, the unit counts as being "in" it and may claim cover from enemy shooting.

Shooting against infantry in a Wood, Swamp, Crops or Food of the Ssú receives 1 Left shift on the Combat table.

7.2.6 Rough Ground: Effect on Visibility and Shooting

Rough Ground has no effect on visibility or shooting.

7.2.7 Roads: Effect on Visibility and Shooting

Low roads have no effect on visibility or firing. For instance, a unit on a road in a Wood is still subject to the LOS limitations of the Wood, and still receives the benefit of the cover provided by the Wood. See Fortifications for the effects of Sákbe roads.

7.2.8 Open Country: Effect on Visibility and Shooting

Visibility across open country is unlimited unless obstructed by other terrain, or by other effects as specified for a given scenario (such as fog limiting LOS to 6", for instance).

8 Close Combat

Close combat represents units advancing to take the enemy's ground by dint of hand-to-hand combat. There are two sorts of close combat, Charge and Melee. Charge Combat represents initial contact between units after movement by one side. Melee Combat represents ongoing hand-to-hand that occurs when units have remained in contact after a Charge, either because of a draw or because of a pursuit of the same unit that was charged previously.

8.1 Initiating a Charge

If, during its Movement Phase, the Front Center Point (FCP) of a unit is moved into contact with any part of an enemy unit, the moving unit is considered to be Charging. If a unit cannot contact the enemy with its FCP, it cannot initiate Charge. (See 5.5 Movement into Contact.).

If an Artillery, Lightning Bringer, Command, Hero or Magic User unit is Charged and is in base contact with an adjacent friendly combat unit(s) that has not been contacted by the attacker, one such unit may also be included in the resulting Charge Combat (if more than one, defender's choice which). In other words, the adjacent unit is considered a part of the contacted Artillery, Lightning Bringer, Command, Hero, or Magic User unit for the purposes of FCP contact.

The attacker decides the order in which Charges are resolved. If multiple units are contacting multiple units, resolve the entire group of units in contact as a single combat.

8.2 Calculating Close Combat

When a Charge occurs, all units involved fight using their Charge value, regardless of whether they moved or not. The Charge value of each unit is modified by close combat Modifiers and then the corresponding column is located on the Combat Resolution Chart. If there are multiple friendly units, their modified Charge values are added together.

Close Combat Modifiers	
Spent	x0.5

Column Shifts are applied as appropriate for each side.

However, only one shift, the largest, is applied for each row on the close combat Column Shifts Table for a side. For example, if two units charged and contacted an enemy and one has 2 Right shift for formation and the other has a 1 Right shift for formation, only the 2 Right shift is applied.

Close Combat Column Shifts	
Formation	varies
Rear support (or Pikes in Mighty Block)	2R
Flank support (left and right)	1R
Attacking in Opponents Fl or Rear	3R
Disrupted	2L
Enemy's Defense	varies
Opponent in Cover	varies

8.2.1 Effects of Terrain on Close Combat

The terrain in which a combat takes place may result in column shifts for one or both sides. The effects of terrain are detailed below.

8.2.1.1 Hills: Effect on Close Combat

A gentle slope causes the downhill unit to suffer a 1 Left shift in Charge and Melee.

A steep slope causes the downhill unit to suffer 2 Left shifts Charge and Melee.

To qualify for the modifier, the FCP of the uphill unit must be on a Hill, and the FCP of the downhill unit must be on the same hill and closed to the lower level.

If a Close Combat continues into Melee, the defending unit only receives a modifier for being on a hill if the FCP of the attacker is still on a lower level than the FCP of the defender.

8.2.1.2 Watercourses: Effect on The Close Combat

If a charging unit moved across a stream within 3" of the defending unit's nearest edge, the charging unit suffers a 1 Left shift in the Charge.

If a Close Combat continues into Melee, the unit that crossed the stream suffers the left shift only if its front edge is touching the stream.

Units, other than Serudlá, which attack across a bridge suffer a 3 Left shift. If a Close Combat continues, and any portion of the unit that crossed the bridge is still touching the bridge then the attacking unit will continue to suffer the 3 Left shift.

8.2.1.3 Built Up Areas: Effect on Close Action

Units in a BUA may only gain cover in the assault if they have “occupied” the Village or Town. This means that the elements of the unit have occupied crucial strong points and barricaded access points, etc. A unit occupies a BUA by changing formation to The Fortress of Milingáno of Vrá. Units occupying a BUA have no flank or rear and may shoot ½ of their Shooting factor out each side of the BUA, but never more than the units’ total Shooting factor. Up to two units may occupy a BUA if they will fit completely within the BUA while in the Fortress of Milingáno of Vrá formation. The occupying unit(s) is(are) considered to be defending the edges of the BUA. Their combat factors are combined for shooting and close combat.

A Village gives occupying units cover worth 1 Left shift in the Combat Table for close combat.

A Town gives occupying units cover worth 2 Left shifts on the Combat Table for close combat.

If a close combat continues into melee, occupying units still receive the appropriate modifier. Occupying units that are forced to Retire or Flee automatically change to Mighty Block formation and are no longer considered to be occupying the BUA. Units that are forced to Retire from a BUA may withdraw to an adjacent BUA and halt immediately. Units that are forced to Flee from a BUA must do so as from any other combat loss.

8.2.1.4 Fortifications: Effect on Close Combat

Units immediately behind Barricades, Entrenchments, and Fortified Walls gain cover when charged and during melee.

As with BUAs, units only gain the benefits for Forts if they are “occupying” them. This means that the elements of the unit have occupied crucial strong points, amassed ammunition, etc.. A unit occupies a Fort by changing formation to The Fortress of Milingáno of Vrá. Units occupying a Fort have no flank or rear and may shoot ½ of their Shooting factor out each side of the Fort, but never more than the units’ total Shooting factors. Up to two units may occupy a Fort if they will fit completely within the Fort area while in the Fortress of

Milingáno of Vrá formation. The occupying unit(s) is(are) considered to be defending the edges of the Fort. Their combat factors are combined for shooting and close combat.

Barricades give cover worth 1 Left shift.

An **Entrenchment** gives cover worth 2 Left shifts.

Forts and **Fortified Walls** give cover worth 3 to 5 Left shifts (defined in the scenario).

Total modifiers for Fortifications and BUAs in a single Assault cannot exceed 5 Left shifts.

If a close combat continues into melee, a defending unit in a Fortification (which has not been forced to retire) still receives the appropriate modifier.

An attacking unit never receives a modifier for being in a Fortification.

A unit occupying a Fort (not Barricades, Entrenchments, Fortified Walls) cannot be Outflanked.

Units with the Sapper attribute attacking fortifications suffer one less left shift than normal. A unit may not attack enemy defending Forts or Fortified Walls of level 3-5 unless they have the Sappers attached, which simulates the presence of the necessary equipment, like ladders, towers, etc.

8.2.1.5 Vegetation: Effect on Close Combat

Units that are not specialists in Woods suffer a 1 Left shift on the Combat chart in Charge and Melee. Units that are not specialists in Swamp suffer a 2 Left shift on the Combat chart in Charge and Melee.

8.2.1.5 Rough Ground: Effect on Close Combat

Units that are not specialists in the specified sort of Rough Ground suffer a 1 Left shift on the Combat chart in Charge and Melee.

8.2.1.6 Roads: Effect on Close Combat

Low roads have no effect on close combat. See Fortifications for the effects of Sákbe roads.

8.2.1.7 Open Country: Effect on Close Combat

Open Country does not affect Charge or Melee combat.

8.3 Combat Results

After both sides have rolled for Charge Combat resolution, the casualties are noted by the owning player. A side with multiple units involved in Close Combat must distribute the losses as evenly as possible among units in contact with the enemy.

8.3.2 Winning and Losing

The loser of a close combat is the side that suffered more casualties.

After determining the number of casualties inflicted by each side, consult the Combat Results Chart using the Charge column. The winning side is the one that inflicted the most casualties on the enemy. Apply the

results to the losing side, by moving them per the results based on difference in casualties caused and apply any status.

The winning side **MUST** immediately make a Command roll. If allowed by the Command roll result, the winning unit may pursue and in some cases may be required to pursue. If the pursuing unit(s) re-contact the same units they charged, then there will be Melee Combat to resolve on the next player turn (assuming no one breaks off).

If casualties are equal, then it is a draw. Both sides remain in close combat and will fight again in the next close combat phase as a Melee Combat, assuming no one breaks off.

Close Combat Result		
Impact	Casualty Diff	Melee
Draw.	0	Draw.
Loser broken if Artillery, others retire 1/2 move. Winner may pursue. If make contact with new enemy, fight new Charge immediately.	1	Loser destroyed if Artillery, others retire 1/2 move. Winner may pursue; rolls Command with -1.
Loser broken if Artillery, others flee full move. Winner may pursue; rolls Command at +1. If make contact with new enemy, fight new Charge immediately.	2	Loser destroyed if Artillery, others lose one figure, flee full move. Winner may pursue.
Loser BROKEN , remove from table. Charger must roll Command with a +2; must pursue with * result. If make contact with new enemy, fight new Charge immediately.	3	Loser BROKEN , remove from table. Winner must roll Command with +1 and must pursue with a * result.

8.3 Charges Halted by Shooting

During the Defensive Shooting Phase, the defending player's units may shoot at Charging units at any eligible point in their movement. It will sometimes happen that a Charging unit is Halted by shooting. In such a case the Charge is considered to have been aborted and does not proceed to resolution. (See 'Halted' under 6.5 Calculating the Effect of Shooting.)

8.4 Resolving a Melee

After all Charges have been resolved, then Melee Combats are resolved in the order desired by the active player. Melee combats occur when enemy units have remained in contact after a Charge or Pursuit in a previous player turn or after a previous round of Melee, with at least one side having a unit in frontal contact.

Melees are conducted exactly as Charge combats, with the exception that unit Melee values and column shifts are used instead.

8.4.1 Retire and Flee Moves

See 5.5.3 Movement and Close Combat.

8.4.2 Pursuit Moves

See 5.5.3 Movement and Close Combat.

8.4.3 Contacting Fresh Enemy Units

If an enemy side in a Charge Combat is destroyed or forced to retire or flee and the winning unit(s) pursue, it

may happen that the pursuers meet fresh enemy units. In this case, another Charge Combat is fought immediately. If the enemy unit is already in a Charge Combat that has not been resolved yet, the pursuing unit joins that Charge Combat. If it is in a Melee Combat that has not been resolved yet, it joins the Melee using its Charge factor, while all the other units use their Melee factors. If it contacts a Charge that has already been fought this Combat phase, then it will join the Melee next player turn.

If an enemy side is destroyed in Melee Combat, the pursuit is conducted in the same manner as for Charge Combat. However, combats resulting from contact with new enemies are fought as Charges Combats the next Close Combat phase.

Only one pursuit movement is allowed in a close combat phase. After a second victory, you may only halt and change formation and/or facing.

8.4.3 Automatic Exploitation

If the target unit is destroyed by shooting before the charge, the charging unit may redirect toward another enemy unit that is within 45 degrees of the front center of the unit. If the unit is Aggressive or Devastating Chargers, they must take that option. If there are no enemy units qualifying as new targets, then the unit may conduct any allowed move.

9 Magic

9.1 Magic - General

Magical spells and defenses cast on the battlefield are considerably different from those cast by individual spell casters. To begin with, spells cast on the battlefield are done so by groups of spell casters and their assistants, numbering in the hundreds. They train for years to become proficient at this sort of spell casting. Second, the spells are powered, not wholly by the caster, but by Military Priests, who serve as batteries of other planar power to energize the spells. Third, the spells have much greater range and effect, reaching as far as the eye can see on the battlefield and affecting thousands of individuals.

In reality, each legion usually has its own unit of Magic Users supporting their comrades in battle. For the purposes of **Legions of Tékumel**, we collect all the Magic Users into usually one unit. The Livyáni differ in that they may have more units that actually fight as well as casting magic. The nonhuman races also have various methods of organizing their magical contingents.

9.1.1 Magic Points

Magic Users are assigned Magic Points for the entire battle based on their Quality and a random d6 roll (1-6). Additionally, in a High Magic Area, an additional 4 points are available, and in a Low Magic Area 4 fewer points are available.

When a spell is attempted Spell Points are expended to power it. The Spell Points are marked off the Magic User's Spell Points card. A Magic User must have enough unused points to fully power a spell. When all points are expended, the Magic User may no longer cast any magic. However, any spell previously cast on friendly or enemy units remains in effect until they expire or are dispelled. The protective spells on the dais continue to be effective until the end of the day.

You can track your magic points on the track provided in the supplementary appendices.

9.2 Casting Magic

Spells may be cast before the beginning of the battle and then during specified phases of the battle as it progresses.

9.2.1 Pre-battle Spell Casting

Prior to the battle, spell casters may cast some preliminary spells, the number of which is determined by their Quality. These spells may not be cast on enemy formations or beyond the army set up area. They may not be blocked by the enemy. Instantaneous spells may not be cast pre-battle. Pre-battle spells use points from the caster's store of magic points.

Illusory terrain phantasms may be cast during the terrain selection and deployed as normal terrain.

Spells that affect friendly troops are cast as the troops are deployed, placing the appropriate token with them. No more than one spell may be applied to a single unit.

9.2.2 Casting During the Battle

At the beginning of a player's Command & Movement, Offensive Shooting and Defensive Shooting phases, magic users may cast spells. Spells are always cast at the beginning of the phase, and the effects take place before any other events of the phase.

The defensive spell Shield of Hnálla is the only spell that may be cast in the opponent's Magic phases. When an enemy spell and its intended target is declared, the opposing player decides whether to cast the Shield of Hnálla to oppose it.

9.2.2.1 Spell Range and Visibility

When standing on a dais, spells have no range limit other than visibility. If a magic user can see the target, he may cast a spell at it. Daises have a height equal to a one level hill. This means magic users on a dais can see over all friendly and enemy units on a level below them.

Visibility for magic users on the ground are limited per the terrain rules. Magic users may not see through friendly or enemy units on the same or higher level, unless the intervening unit is invisible. Magic users that are attached to a combat unit, or Livyáni Díodaz, may determine the line of sight from anywhere on the outer edge of the unit.

9.2.2.2 Command, Movement and Spell Casting

Magic users may not cast magic in a player turn in which they move or recover casualties. Likewise, if they cast magic they cannot move in the same player turn. This means if a magic user unit rolls for command and moves in the Command and Movement Phase, he may not then cast in the Offensive Shooting phase of the same player turn. If the magic user casts magic in the Command and Movement Phase, then he may not move in that phase.

Because disrupted units must make a command roll, **disrupted units may not cast magic.**

Spell Casting			Pre-
Quality	Success	Points	battle
Elite	6+	24	3
Veteran	8+	22	2
Trained	10+	20	1
Raw	12+	18	0

9.2.3 When to Cast Spells

The active player may cast spells at the beginning of the Command & Movement and Offensive Shooting phases. The non-active player may cast spells at the beginning of the Defensive Shooting phase. The Shield of Hnálla may be cast in the opposing player's magic phases.

Casting a spell uses one or two Spell Points, which are marked off the Magic User's Spell Points when the spell is declared.

9.2.4 Spell Casting Success

After the spell is declared, then you must roll to cast it successfully. The success roll is determined by the Quality of the Magic User. If the spell is not blocked and the roll is successful, the spell takes effect. The cost to cast the spell is paid whether it is successful or not.

Magic Users that have become spent as a result of casualties suffer a -3 to the die roll for success.

9.2.5 Spell Effects

Spell effects may be applied directly against units or they may affect combat or command rolls or they may affect the battlefield. Many spells have immediate effects, which means they are applied once and then have no further effect. Others may have duration, which means that the effect of the spell continues for

some specified time, or until ended by the Magic User or dispelled by the enemy Magic Users.

9.3 Magical Spells

9.3.1 Buckler of Qíyor

This spell creates a magical barrier over one friendly unit, protecting it from missile attacks.

Cost: 2

Target: One friendly unit within LOS.

Effect: Any shooting at the target unit will suffer shift Left of 6. This spell only affects physical missiles, including Serudlá spit, but not magical spells or the beam of a Lighting Bringer. It may not be stacked.

Duration: Lasts until the target unit suffers a casualty from shooting (including from an additional disruption) or it is dispelled.

9.3.2 Fist of Vimúhla

This spell hurls sorcerous fire or lightning at the enemy.

Cost: 2

Target: One enemy unit within LOS.

Effects: Shooting attack of Factor 15. Unit's Defense does not apply.

Duration: instantaneous

9.3.3 Embrace of Sáрку

A mighty shadow of fear is cast over opposing troops.

Success: Auto

Cost: 2

Target: one enemy unit within LOS.

Effects: Unit suffers a shooting attack at factor 28; however, no casualties are suffered, only the movement and morale effects are applied. These factors are shifted according to the target unit's Quality: Raw 2R, Trained 0, Veteran 1L, Elite 2L.

Duration: instantaneous

9.3.4 Exertions of the God-King

This spell fills its subject with miraculous endurance, inspiring warriors to redouble their efforts under the marvelous influence of magical energy.

Cost: 2

Target: One friendly unit within LOS.

Effect: The target unit may make a second Command Roll during the Command Phase and perform actions allowed. It may be stacked but used only once per Command Phase.

Duration: Until used or dispelled.

9.3.5 Gift of Karakán

This imbues the subject unit with vigor and bravery, elevating their combat capabilities and tactical acumen.

Cost: 1

Target: One friendly unit within LOS.

Effect: Unit rolls 2D20 for Combat (Shooting, Charge, or Melee) or Command and applies the highest roll. The spell may be stacked on a unit but may only be used once per phase. For example, a unit with three Gifts of Karakán on it could use one for Command, then use another for Offensive Shooting and then the last one for Close Combat.

Duration: Until used or dispelled.

9.3.6 Visions of Drá the Uncaring

This spell calms and slows the target unit.

Cost: 1

Target: one unit within LOS.

Effect: Unit's normal movement is halved. These spells may be stacked, each reducing the target's movement by half, to a minimum of 1".

Duration: until the after the Command phase in which the affected unit makes a command roll of 13 or better (on the die, before applying modifiers) or it is dispelled. Even if not required to make a movement, a unit may make a command roll in an attempt to break the effects of the spell.

9.3.7 Hnálla's Radiant Barrier

This defensive spell disrupts enemy magic by blocking its effect as it is cast. The Hnálla's Radiant Barrier is cast in response to an enemy spell that is being cast.

Cost: 1-2 (same as spell to be blocked)

Target: one enemy Magic User unit in LOS.

Effects: This spell is the only one that can be played in the opponent's magic phases. When the opposing player declares a spell to be cast and its target, you must decide whether to expend points and attempt to block the enemy spell. If you decide to attempt to block the enemy spell, then you must roll for the success of this spell. If the roll is successful, then the enemy must apply a -6 to his spell success roll.

Duration: instantaneous

9.3.8 Shield of Hrü'ü

This defensive spell protects a unit from enemy magical spells.

Cost: 1

Target: one friendly unit in LOS

Effect: Enemy spells cast against a unit protected by the Shield of Hrü'ü must make a success roll with a -8 modifier to cast their spells against the protected unit. The -8 modifier does not apply against the Light of Sapient Glory cast against the Shield of Hrü'ü spell itself.

Duration: until an enemy spell is successful against the protected unit or it is dispelled by the Light of Sapient Glory.

9.3.9 Scintillation of the Ebon Flame

This spell creates phantasms of units or terrain. Within line of sight, the caster may cause to appear a single unit of any sort, which should then be placed on the table in a desired formation. Alternatively, the caster may place a single phantasmal terrain piece, not to exceed two levels high and 24" square, with a minimum dimension of 3". (For example, 3" x 8" is allowed, but 2" x 12" is not.).

Cost: 1 for phantom terrain; 2 for phantom unit

Target: When cast during deployment, the player may deploy this as a unit or as a piece of his allowed terrain. He should note under a unit or terrain piece that this is

a phantasm. At the beginning of the battle, the spent Spell Points must be marked off.

When cast during the course of the game, a target is placed on the battlefield within LOS of the caster.

Effects: The terrain phantasm has its full effect of that terrain until the spell expires or is dispelled, including when units move into or through it.

If a phantasmal unit is conjured, it is placed on the target marker and then it moves like any other unit of the type depicted. A unit phantasm will have no effects for shooting or combat directly, but they may offer rear support to friends and will cause hated enemies to react. For example, a unit of phantasmal Ahoggyá may cause a unit of Shén to charge them.

Duration: The phantasm persists until any one of the following happens:

- it is out of LOS of the caster
- enemy troops contact or move through the terrain phantasm
- enemy troops contact the unit phantasm
- it is dispelled
- the caster declares it ended or casts another Scintillation of the Ebon Flame spell.

9.3.10 Veil of Invisibility

This spell renders any unit invisible to some degree. The unit becomes more difficult to target for shooting and fighting in Charge Combat. However, the effects they have on the physical world are still evident, like dust churned up, crops trampled, etc. The best way to represent invisible troops is to simply remove the figures from the movement tray and move that on the table.

Cost: 2

Target: one friendly unit within LOS.

Effects: Invisible units are represented on the table by a unit formation tray with no miniatures. invisible units that are shot at gain an additional 4 Left shifts Defense. If contacted by the enemy, the charging unit does not get Offensive fire, as they were not sure of the enemy's location. During Charge combat, the invisible unit gets a

1 Right shift and the enemy suffers a 2 Left shift. In addition, invisible units may not support friends, nor are hated enemies forced to attack them.

Invisible troops are treated as in Difficult terrain for command purposes, suffering a -2 modifier. If they are in Difficult terrain, it is not applied twice.

Duration: Invisibility persists until any one of the following happens:

- the unit is out of LOS of the caster
- after being involved in close combat (immediately after resolving the combat, the unit becomes visible)
- it is dispelled
- the caster declares it ended

9.3.11 Light of Sapient Glory

This spell is used to dispel enemy spells that have duration.

Cost: 1

Target: It may only be cast on already active spells. It may be cast on any magically protected or affected unit or phantasm to dispel the magical effect, which must not have an Instant duration. It may also be cast against magically warded or protected features.

Effect: A success must be rolled to overcome an enemy spell and dispel it. If cast successfully, the target spell is dispelled immediately. In the case of phantasms, they are immediately removed from the table. In the case of other spells, all effects, or future effects, cease. For example, the Magic Users could dispel the Buckler of Qiyor on an enemy unit at the beginning of the Shooting Phase, so that it will not protect the unit in the same phase. It only affects a single spell. So, if several spells are affecting a unit, the player must choose which to affect. An additional -6 for success is applied when trying to dispel Wards or Protections (see 9.4.5 below).

Duration: instantaneous

9.4 Wards and Protections

In addition to the magical spells that the team of Magic Users cast on the day of battle, it is common for various wards and protections to be cast on stationary objects

before the battle. These wards and protections are to protect troops in a static location from missiles and magical and technological effects. The most common uses of wards and protections is to apply these to the daises used by Commanders and Magic Users on the day of battle. Additionally, fortifications may have wards and protections applied to protect them and the troops occupying them from enemy action. The source of the wards and protections may be ritual magical spells of various duration (from a day or two for temporary structures to months and years for permanent fortifications), enchanted objects and magico-technical devices. Which method of creating the wards and protections is not really important, as they all have similar game effects.

Wards and Protections effect the troops occupying up to two adjacent daises or a single fort. They also affect a 12" length of fortification or Sákbe road. Units that are at least half within the affected area receive the benefits of the Wards and Protections. Protections and Wards may be stacked together, but Wards may not be stacked with Wards, nor Protections with Protections.

Armies do not need a magical unit to use Wards and Protections for the daises and fortifications they deploy.

9.4.1 Protections

Protections are designed to protect the troops in the affected area from physical and technological attack.

Effect: Protection reduces the combined shooting factor of all shooting against it to no more than 6.

9.4.2 Wards

Wards exist to protect the troops occupying the affected area from magical attack. In general, Wards make it more difficult to achieve spell success.

Effect: All magical attacks against troops or objects protected by wards must roll for spell success and suffer an additional -6 success modifier when casting.

9.4.3 Daises

All daises from which Magic Users cast their spells and Commanders control the battle have wards and protections. Magic Users, Commanders, and Heroes NOT in daises do not have these wards and protections.

9.4.4 Fortifications

Fortifications may have wards and protections cast on them to protect the troops occupying them. The wards

and protections work no matter who is occupying the fortifications.

9.4.5 Dispelling Wards and Protections

As Wards and Protections are particularly complex Ritual spells, they are very difficult to dispel with battlefield magic. A modifier of -6 is applied to any success roll for the Light of Sapient Glory cast against a Ward or a Protection.

9.5 Card List

The following is a list of cards included in the Magic Deck.

Spell cards include the name of the spell and the basic effects.

1. **Buckler of Qiyor Spell**
2. **Fist of Vimúhla Spell**
3. **Embrace of Sáрку Spell**
4. **Exertions of the God-King Spell**
5. **Gift of Karakán Spell**
6. **Visions of Drá the Uncaring Spell**
7. **Hnálla's Radiant Barrier Spell**
8. **Shield of Hrü'ü Spell**
9. **Scintillation of the Ebon Flame Spell**
10. **Veil of Invisibility Spell**
11. **Light of Sapient Glory Spell**

10 The Battle

Large battles (*Qadárkoi*) in war (*Qadárdàlikoi*) in the world of Tékumel tend to be formalized and pre-planned. Once the armies have concentrated in the theater of war and approached one another, representatives from both sides meet before the engagement to determine when and where a battle is to be fought. The terrain over which the battle is to be fought is a particularly important negotiating point in the pre-battle conference.

10.1 The Armies

Armies are assembled from the lists in the Armies of Tékumel books, which have complete details of the various armies of the Five Empires and smaller nations and also instructions about how to assemble your armies. Each unit of the army has a point value. The Army Points are the total point value of all the units (combat units, Commanders, Magic Users, and Heroes).

If the Army Points of the opposing forces are even (within 10 points) then they are well matched and you can move on to Terrain Determination. If, however, one side has more Army Points, then the side with the smaller value army can use the point difference to purchase stratagems or fortifications. Stratagems are kept secret until they are revealed, while fortifications are deployed with other terrain. Each army has its own set of stratagems and fortifications addressed in each army book.

All of this is covered in detail in the Armies of Tékumel books.

10.1.1 Building an Army

Armies are built either from “historical” orders of battle or by points. In the former case, the units and their strengths are determined by a specific battle scenario or by the complete listing of troops in a campaign. This book includes the Battle of the Temple Chánis, which describes the units of both armies and the battlefield.

10.1.1.1 Armies from Points

In many cases, players will want to deploy the units of models they have spent many hours modeling. To

facilitate this method of constructing a battle, each unit has a Cost, which represents its value compared to other units. The Cost of a unit is derived from a complex formula that weights the various combat stats of Quality, Charge, Melee, Shooting, Defense, and any other special abilities. Commanders, Magic Users, and Heroes are also assigned Costs based on their stats. An army's Total Cost is the sum of the Costs of its units, Commanders, Magic Users, and Heroes.

10.2 The Battlefield

Players may determine the battlefield in any manner they choose. If you are refighting a battle of the past then the terrain and troops will be determined by the scenario. Another alternative is to allow one side to set up the terrain and the other side to select the table edge on which they will deploy.

In **Legions of Tékumel**, we assume most battles take place on a 6' by 4' battle area. The armies are deployed on the long edges of the table, known as the deployment edge for each side. The short sides are known as the flank edges. Deployment of units and placement of terrain will refer to these edges.

10.2.1 Terrain Determination

One simple method of determining the terrain on the battlefield is for each player to select an agreed upon number of terrain pieces and alternate setting them out. You may want to allow players a number of rolls to remove enemy-placed terrain pieces; for example, after all the terrain is placed, each side gets to roll a D20 against 2-3 enemy place terrain and may remove that piece on a 11+.

Different terrain pieces have size and placement requirements.

Terrain	Minimum Size	Maximum Size	Special Rules
Open Area, Crops	4" dia	8" dia	
Gentle Slope Hill	4" dia	12" dia	Smaller slopes may be placed atop previously placed slopes.
Steep Slope Hill	4" dia	8" dia	Smaller slopes may be placed atop previously placed slopes.
Hill with Impassable Cliffs	4" dia	8" dia	Same as a Steep Slope Hill, but with some edges, from 25% to 100%, impassable.
Stream	24" long	60" long	Less than 1" wide. Connects two table edges or table edge to coast, stream, river, pond, lake, swamp or marsh. May not include more than 180 degrees of turns. May not be placed on hills but may pass through any other terrain. May cross a road but not be laid over it. If successfully rolled to move, select one end to move and then rearrange the rest, following the placement rules above.
River/Coast	48" long	48" long	2" to 4" wide. Must be within 4" of a short table edge and parallel to that edge.
Pond, Lake	4" dia	6" dia	May be placed on a hill, but not across a slope.
Woods, Enclosed Crops	4" dia	8" dia	May be placed fully or partially on a hill.
Swamp. Marsh	4" dia	8" dia	May not be placed fully or partially on a hill.
Food of the Ssú	4" dia	8" dia	Not allowed if there is a BUA already placed.
Rocky, Sandy	4" dia	8" dia	May be placed fully or partially on a hill.
Village BUA	4" x 4"	6" x 6"	May be placed fully or partially on a hill. May not be placed within 24" of Food of the Ssú
Town BUA	4" x 4"	6" x 6"	May be placed on a hill. May not be placed within 24" of Food of the Ssú. If no roads are placed, it must touch the centerline of the table. If roads are already placed, it must be on or adjacent to a road. May be moved along the road, but not off.
Fort	4" x 4"	6" x 6"	Purchased with Army Points. May be placed on a hill. May not be moved.
Fortified Walls/Sákbe road	24" long	48" long	Sákbe road is only allowed if in hex with such indicated. For standard battles, it is assumed that the armies have decided to meet in the open. Therefore, both fortified walls (of a city) and Sákbe roads must be within 4" of a short table edge and parallel to that edge.

Low Road	24" long	84" long	Connects two table edges or table edge to road or BUA or Fort. If a Fort or BUA is already placed, the road MUST connect to it or pass through it. May pass through any except impassable terrain. May cross a stream, but may not be laid over it. May not include more than 180 degrees of turns. If successfully rolled to move, select one end to move and then rearrange the rest, following the placement rules above.
Bridge	na	na	When a Low Road crosses a stream or ends at a river, roll a D20. On a 1-10 there is a bridge. Sákbe roads always bridge streams.
Fortifications/Barricade/Entrenchments	4"	6"	Purchased with army points. May not be moved.

10.2.2 Illusory Terrain

During terrain determination, a Magic User may cast Scintillation of the Ebon Flame spells to create illusory terrain in addition to the terrain selected. These are deployed as normal terrain along with the other terrain. Any sort of terrain may be used.

10.2.3 Weather (Optional)

This section is provided mainly to allow for the effect of the Curtain of Unseeing.

The armies of Tékumel will rarely have an open field battle on a stormy or rainy day. However, the weather may have some effects on the battle, even when both sides decide to fight. Roll on the charts for precipitation and wind to determine any battlefield effects.

10.2.3.1 Precipitation

Roll a D20

- 1-10 clear and dry - no combat effects
- 11-14 overcast - no combat effects
- 15-18 damp and threatening - Curtain of Unseeing formation has no effect.
- 19-20 mild or sporadic rain - Curtain of Unseeing formation has no effect and all shooting from any bows or crossbows suffers 2L shift.

On a roll of "clear and dry" no further precipitation checks are made for the remainder of the game. In any

other roll, at the beginning of each odd numbered turn after the first, roll again. On a result of "clear and dry" the weather has cleared and no further rolls are needed. On any other result, apply the effects and roll on the next odd turn.

10.2.3.2 Wind

Roll a D20

- 1-6 calm
- 7-14 slight breeze
- 15-18 windy
- 19-20 changing

For a "slight breeze" or "windy" result, roll the wind direction with a D20, assigning the table sides and corners numbers 1-2, 3-4, 5-6, etc. The number rolled is the wind direction. On a roll of 17+ for direction, the wind has dropped to calm.

For a "changing" result reroll again immediately for the initial wind strength (rerolling another D20), then on every odd numbered turn reroll the wind strength and direction.

If the result is "calm" then no wind direction is needed and the Curtain of Unseeing dust cloud does not drift but just raises up over the units making the dust. If the wind is a "slight breeze" the Curtain of Unseeing drifts 2" downwind. If the result is "windy" the Curtain of Unseeing drifts downwind 3" and all shooting (except from Lightning Bringers) suffers a 2L shift.

10.3 Army Deployment

Once terrain is placed, the defending player places all of his command/magic daises (assuming there is more than 1) then the attacker places all of his command/magic daises. A command/magic dais must be within 6 inches of the player's starting table edge.

Once the dais are placed, The defending play places $\frac{1}{3}$ of his units, rounded up. The attacking player then places $\frac{2}{3}$ of his units, rounded up. Then the defending player places the remainder of his units. Finally, the attacking player places the remainder of his units.

The command daises must be deployed within 6" of the deployment table edge. Units with the Skirmisher attribute may be deployed up to 18" from the deployment table edge. All the remaining units may be deployed up to 12" from the deployment table edge.

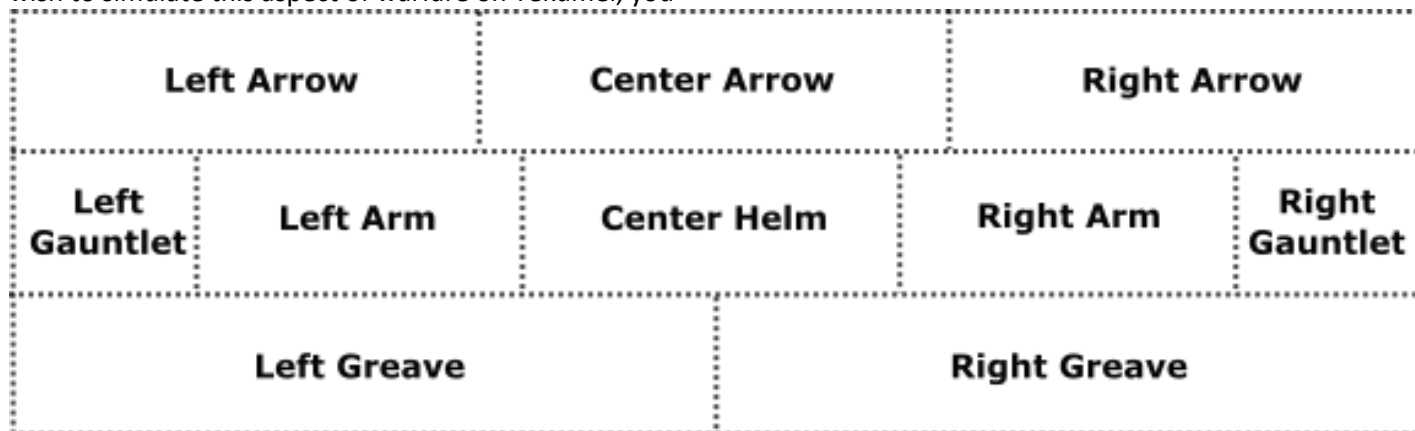

10.3.1 Advanced Army Deployment (optional)

As with unit formations, the deployment of armies and arrangement of the component units are strictly

prescribed by ancient teachings and tradition. If you wish to simulate this aspect of warfare on Tékumel, you

may do so by following the deployments of armies recommended by military scholars Ssamíren of Khéiris and Sa'alúr of Jakálla. When using this option, the deployment area is divided as shown below. The Grieves occupy the area from the board edge to 6" out. The Gauntlets, Arms and Helm occupy the deployment area from 6" to 12" from the edge. The Arrows occupy the area from 12" to 18" from the edge. The entire deployment area is maximum of 60" wide and 18" deep. The various areas of deployment may shift a bit depending on the battlefield constraints and size of the army. Relative placement is what is most important.

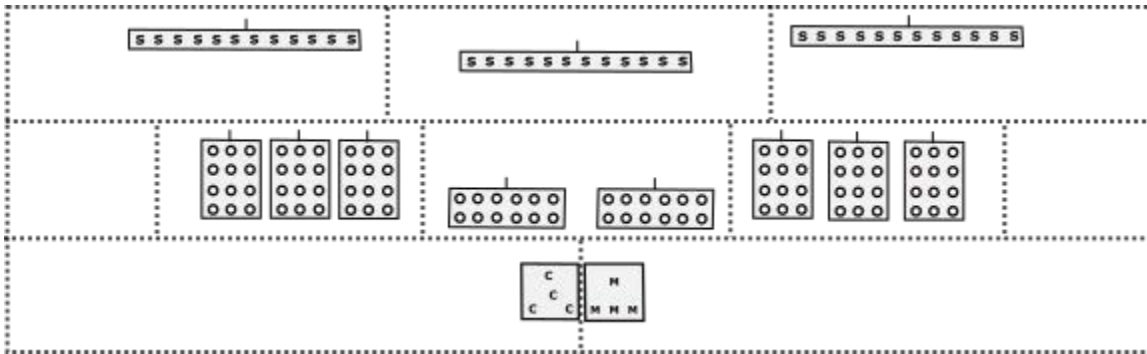

The nations of the Tékumel favor different deployments. If the army is deployed according to a nation's Common Deployment, then all units of the army that are not Disrupted will automatically get a Full Move for the first Command Roll result of the first turn of the game. Armies deployed in a Seldom used deployment make a Command roll with a +2 modifier for the first turn of the game. Armies that are deployed in a Rare deployment or one that does not match any of the prescribed deployments make an unmodified initial Command Roll of the first turn of the game.

Each formation is explained below. To get the benefit of the deployment, units must be deployed in each of the occupied areas shown in the diagram. However, if there are fewer than three Skirmisher units, some Arrow areas may be left empty.

10.3.1.1 The Invincible Glory of Hnúu Téktis

Common: YK, Sa, Pj **Seldom:** Ts **Rare:** Mu, Lv, Sh **Prohibited:** -

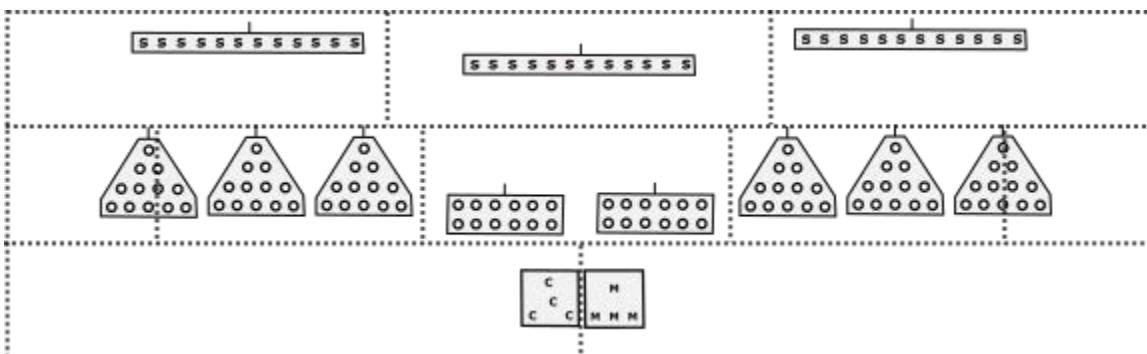

This ancient formation is named after a semi-legendary general of the Three States of the Triangle. It consists of two heavy units (phalanxes, squares, etc.) and a weak center designed only to hold. Light missile troops occupy the Centre Arrow position, and these have orders to fall back through the flank-center gaps before the enemy can come within charge range.

In **Legions of Tékumel**, up to $\frac{1}{4}$ of the Heavy or Medium units may be deployed in the Central Helm in Stone Mountain or Blade of the Sword. The remaining Heavy and Medium units must be divided as equally as possible in the Right and Left Gauntlets and Arms in Stone Mountain or Block. At least one Skirmisher unit must be deployed in the Arrows in Blade of the Sword or Waves of Chanayága. If there are multiple Skirmisher units, they should be distributed across the front as evenly and as centered as possible. Command and magical unit daises are deployed in the Greaves.

10.3.1.2 The Two Peaks of Tso'ó Kínél

Common: Ts, Lv, Sa **Seldom:** - **Rare:** Mu, YK **Prohibited:** Sh

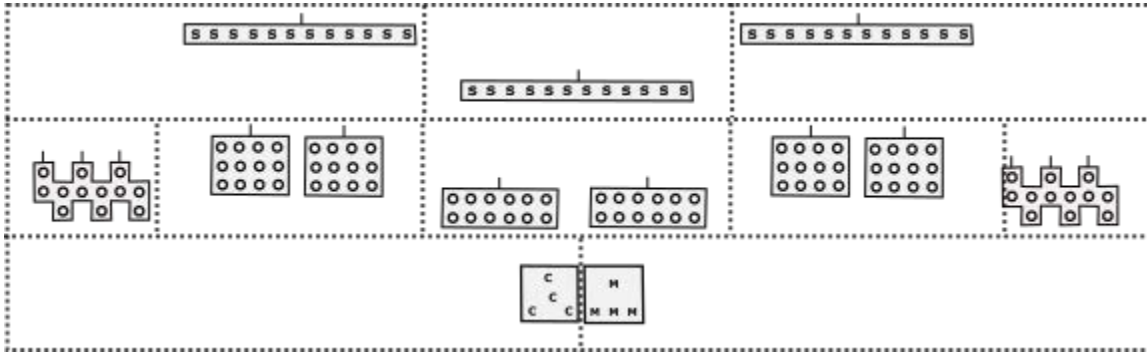

This formation is favored by the Livyáni. It consists of a weak center but has two powerful wedges (or diamonds) in the two inner flank positions. Again, the forward missile troops are programmed to retreat through the gaps and to the sides of the formation as the enemy advances. In a larger battle, the Left and Right Gauntlet positions may be occupied by two more wedge or diamond-shaped units, usually made up of Shen mercenaries. This deployment is similar to the previous one, except that the units in the Arms and Gauntlets deploy in the Divider of Foes of Crystal Square formations.

In **Legions of Tékumel**, up to $\frac{1}{4}$ of the Heavy or Medium units may be deployed in the Central Helm in Stone Mountain, Mighty Block, or Blade of the Sword. The remaining Heavy and Medium units must be divided as equally as possible in the Right and Left Gauntlets and Arms in Divider of Foes or Crystal Square formations. Multiple units in the Arms and Gauntlets may be variously arrayed, and some may be deployed back in the Greaves area. At least one Skirmisher unit must be deployed in the Arrows in Blade of the Sword or Waves of Chanayága. If there are multiple Skirmisher units, they should be distributed across the front as evenly and as centered as possible. Command and magical unit daises are deployed in the Greaves.

10.3.1.3 The Two Mighty Gauntlets of Hruggá

Common: Ts, Sa, YK **Seldom:** Mu, Lv **Rare:** - **Prohibited:** Sh

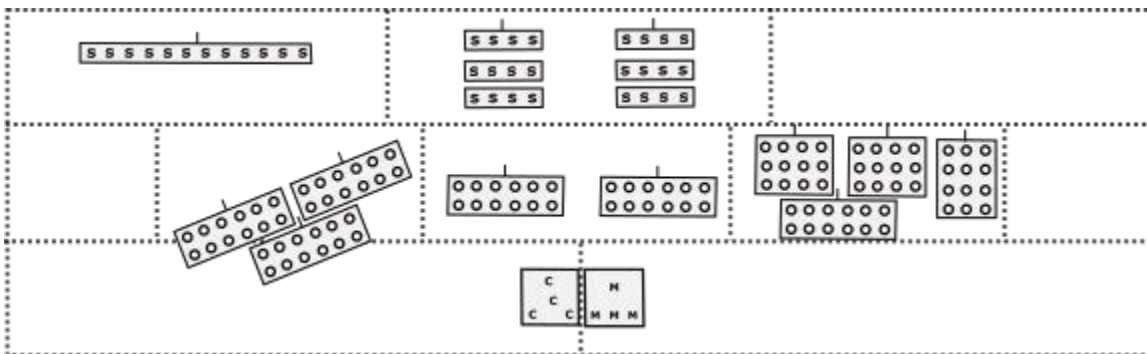

This formation is commonly employed by both the Tsolyáni and the Salarvyáni, and occasionally by the Yán Koryáni. Its main feature is the presence of two powerful (or very fast moving) units in the Left and Right Gauntlet positions; these often have semi-independent commanders and are ordered to hit enemy flanks, take advantage of gaps in the enemy line, and use considerable personal initiative. It has been used with great success in many battles, and it is the one weak center formation which is occasionally adopted by the Mu'ugalavyáni.

In **Legions of Tékumel**, a strong and/or fast Heavy or Medium unit should be deployed in each Gauntlet and usually in a fast-moving formation, such as Garment of Idéssa, Palisades of Murudáni, or the Towers of Púrdanim. In the Center Helm, $\frac{1}{4}$ of the Heavy and Medium infantry should be deployed. The remaining Heavy and Medium infantry are divided equally between the Arms. At least one Skirmisher unit must be deployed in the Arrows in Blade of the Sword or Waves of Chanayága. If there are multiple Skirmisher units, they should be distributed across the front as evenly and as centered as possible.

10.3.1.4 The Mace of Karakán (or Vimúhla)

Common: Ts, YK, Sa **Seldom:** - **Rare:** Mu, Lv **Prohibited:** Sh

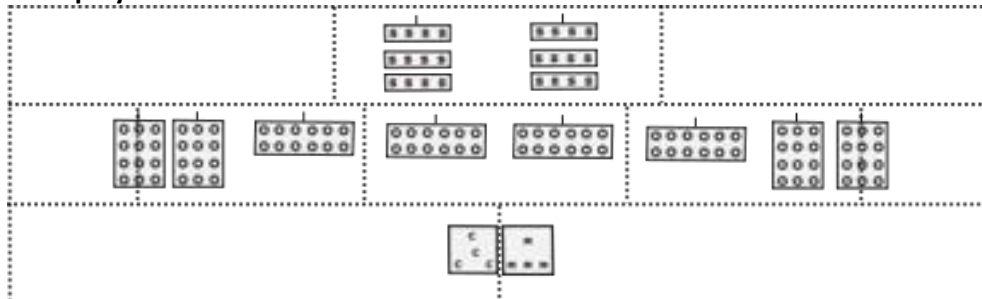

This formation has its most powerful and heaviest units in the inner right flank position; the center is ordered simply to hold, and the left flank consists of some especially strong unit, or a unit which is also commanded to hold, although it may have further orders to exploit enemy weaknesses. If this formation is reversed (i.e. if the heavy unit is placed on the left flank instead), it is called the Mace of Vimúhla.

In **Legions of Tékumel**, half the Heavy and Medium troops are deployed in the Right Arm in Might Block or Stone Mountain; they may extend to the Right Gauntlet if necessary. Another $\frac{1}{4}$ of the Heavy and Medium infantry are deployed in the Center Helm in Blade of the Sword or Stone Mountain. The remaining Heavy or Medium are deployed in the Left Arm, often angled with the left flank back in the Left Gauntlet. At least one Skirmisher unit must be deployed in the Left or Center Arrows in Blade of the Sword or Waves of Chanayága; no skirmishers are deployed in the Right Arrow so as not to impede the rapid advance of those units. If the formation is reversed, it is called the Mace of Vimúhla.

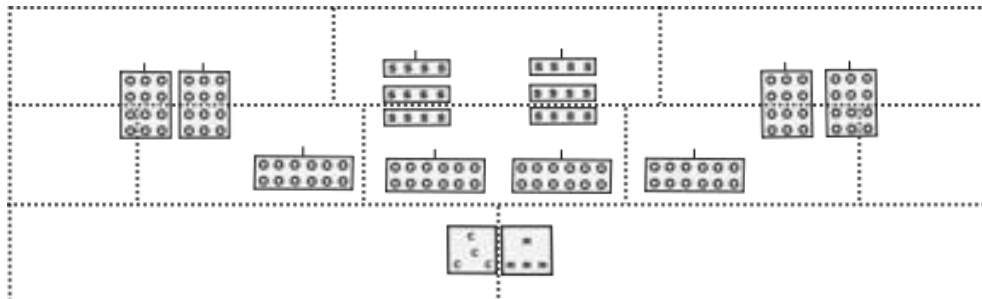

10.3.1.5 The Claw of Krúa

Common: Ts, Mu, YK, Lv, Sa **Seldom:** - **Rare:** Sh **Prohibited:** -

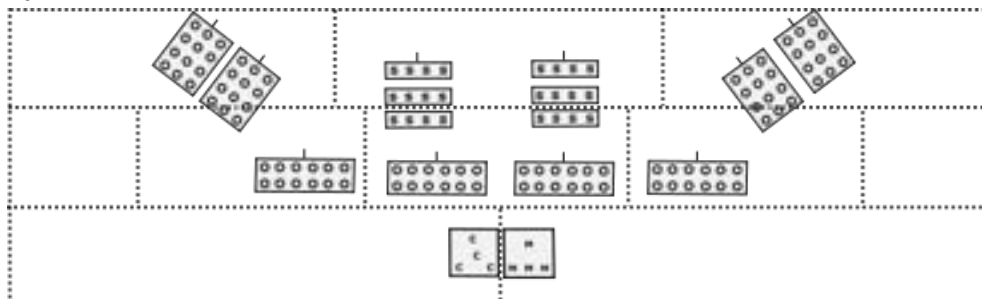

At Deployment

Turn 1

Turn 2

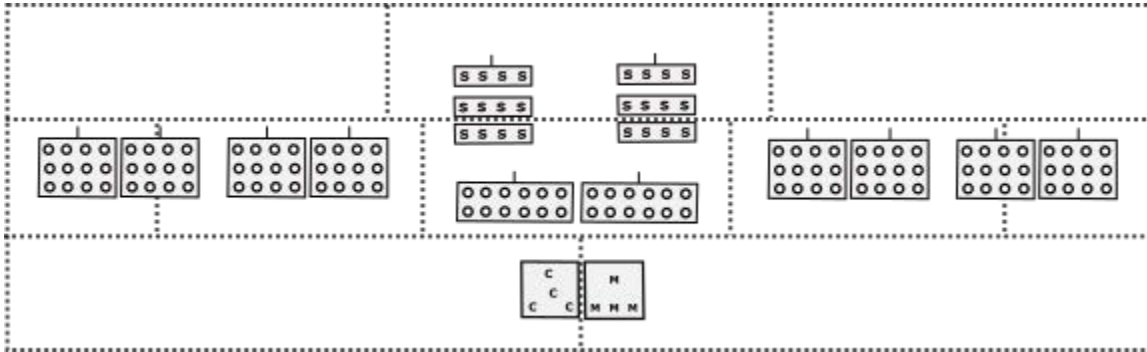

This formation may begin with an advanced center and one or both flanks refused, and only after the two flanks have advanced does it become obvious to the foe that this is the Claw of the Krúa formation. The flanks are, of course, intended to push back the enemy's flank troops and crush his center in upon itself. This battle plan is frequently used by all of the nations of Tékumel.

In **Legions of Tékumel**, the Heavy and Medium units deployed are equally in the Central Helm and the Right and Left Arms, extending to the Gauntlets if necessary. The weakest of the units are deployed in the Center Helm in Sword of the Blade or Stone Mountain, and which is intended to remain stationary. The units in the Arms and Gauntlets are expected to wheel in and crush the enemy. Any combat formations are permitted for the flank units. Skirmishers in Blade of the Sword or Waves of Chanayága are deployed in the Center Arrow to help support the weaker center and avoid slowing the moving flanks.

Special Rule: If on turn one, the units in the Center Helm either remain stationary or retire backward and most of the units in the Arms and Gauntlets advance at least 6", then units in good order in the Arms and Gauntlets get the initial command bonuses on turn two as well.

10.3.1.6 The Five Fingers of Death

Common: Ts, YK, Lv, Sa **Seldom:** - **Rare:** Mu **Prohibited:** Sh

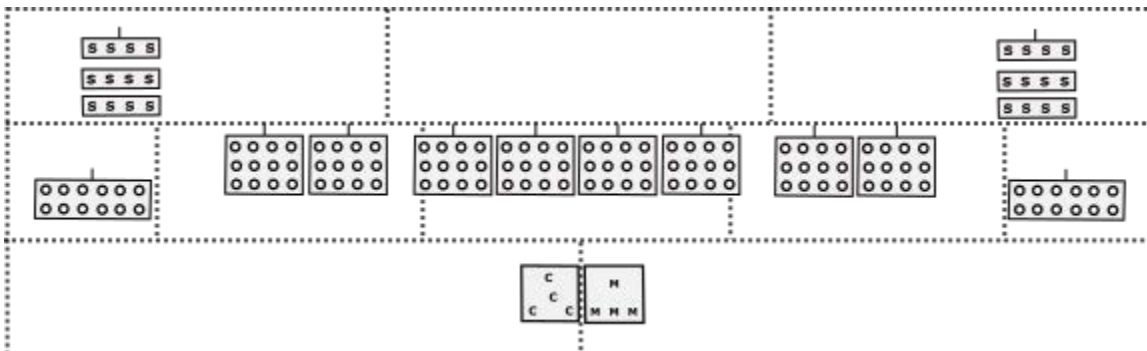

This is simply a variant of the Two Mighty Gauntlets of Hrugá; its flanks are composed of more equally balanced units, however. Some of these flank units may begin behind the center (i.e. in the Left and/or Right Greave positions), and the commander may also opt to change to the Claw of the Krua formation either as a pre-battle decision or by trumpet call during the engagement. This formation is used by all of the major nations except the Mu'ugalavyáni, who, as said above, do not prefer weak center formations.

In **Legions of Tékumel**, up to $\frac{1}{4}$ of the heavy or medium units are deployed in the Central Helm and the remaining units equally divided on the left and right Arms and Gauntlets. Skirmishers should be concentrated in the Center Arrow.

10.3.1.7 The Inexorable Sea

Common: Ts, Mu, YK, Lv, Sa, Sh **Seldom:** - **Rare:** - **Prohibited:** -

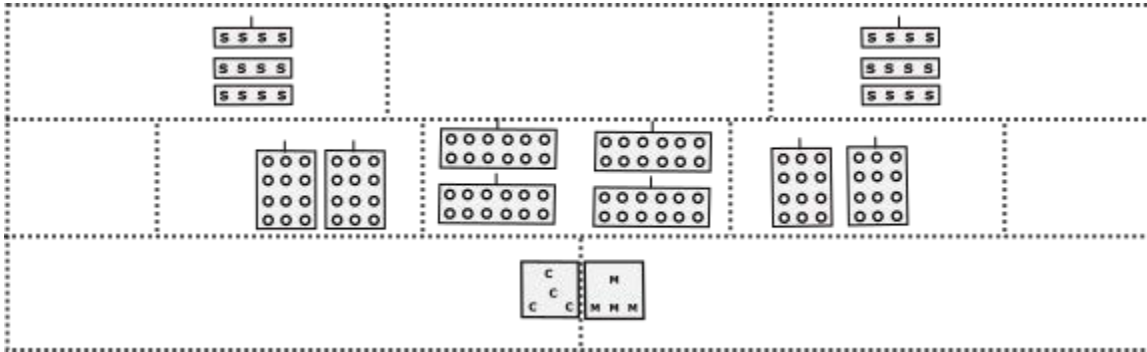

In its simplest form, this formation consists of a central heavy group of units (phalanx, deep rectangle, closely arrayed columns, etc.), with weaker holding units on its flanks. The latter may, of course, be special heavy troops, usually accompanied by lighter missile units to provide flanking fire. This formation is frequently used by all of the major nations of Tékumel, and it (or some more complex variant) is almost the only formation employed by the Shen.

In **Legions of Tékumel**, at least $\frac{2}{3}$ of the heavy and medium units should be deployed in the Central Helm and extending into the Arms. The remaining heavy and medium units should then extend the flanks in the Arms or Gauntlets. Skirmisher should largely be deployed in the Left and Right Arrows.

10.3.1.8 The Two Gates of Wurú, the Many-Legged Serpent of Gloom

Common: Ts, Mu, YK, Sa Seldom: Lv Rare: - Prohibited: Sh

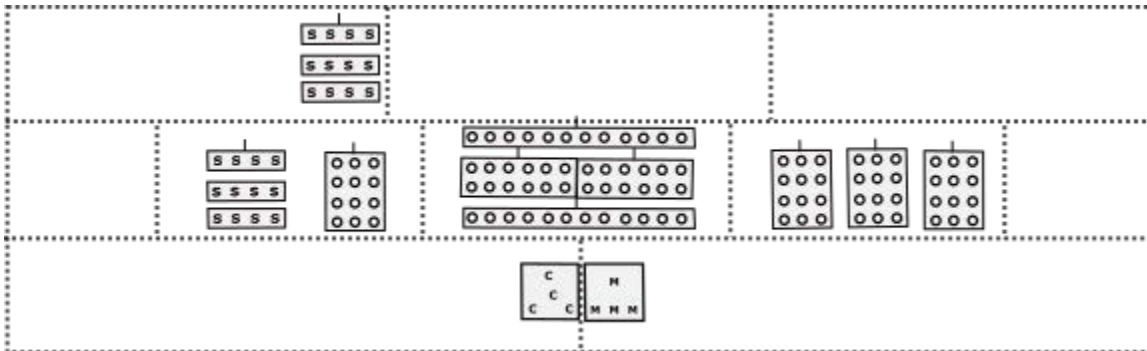

This battle plan consists of two strong central groups, one behind the other, with two comparatively strong flanking groups and accompanying missile troops. A larger variant, the “Five Feshenga of Wuru,” has two further units in the Left and Right Gauntlet positions on the extreme flanks. Missile troops may also be concealed behind the first heavy phalanx, with the ranks of the latter ordered to open up to permit the former to advance, fire, and retreat again; Sa’alúr calls this the “Teeth of the Feshenga” variant. All of these formations are frequently used by the Mu’ugalavyáni, who occasionally also conceal special “warhammer” units behind either or both flanks — although this is considered rather innovative and daring by them. The Tsolyáni, Yan Koryani, and Salarvyáni also utilize this deployment occasionally.

In **Legions of Tékumel**, at least ½ the medium and heavy unit should be deployed in two ranks in the Central Helm, usually in Stone Mountain or Blade of the Sword formations. The remaining units should be distributed evenly to the left and right Arms and Gauntlets, usually in Mighty Block formations. Skirmishers are concentrated in the Left and Right Arrows.

10.3.1.9 The Triple Palace of Skulls

Common: Ts, Mu, YK, Sa Seldom: Lv Rare: - Prohibited: Sh

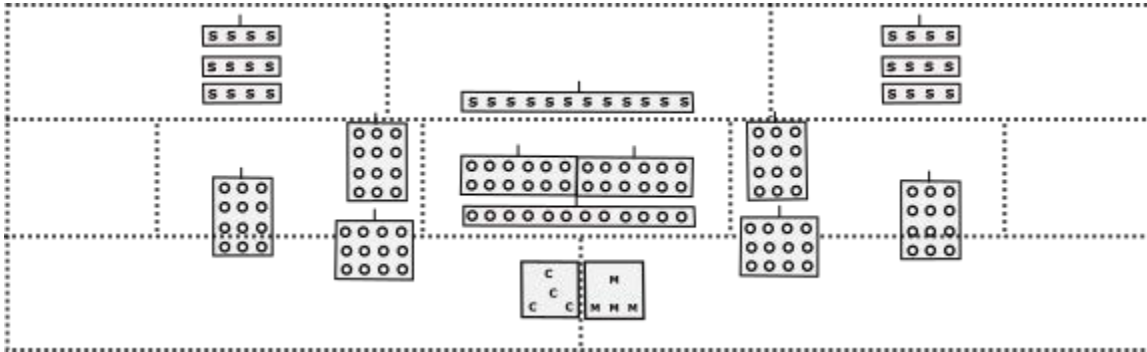

This formation is a favorite with the Mu’ugalavyáni for larger battles. For some reason not clear to the author, both of the great tacticians suggest using unbalanced flanks: a stronger unit in either the Left or Right Arm position, with a concentration of light missile troops and/or skirmishers on the weaker flank. Sa’alúr also proposes to break up the three great phalanxes into squares, rectangles, or columns in a staggered pattern, with units of light missile troops functioning almost independently between these groups.

In **Legions of Tékumel**, at least ½ the medium and heavy units are deployed in three lines in the Central Helm in Stone Mountain and Blade of the Sword. The front line is often medium missile troops, who will retire to the rear and become support for the main line. At least ⅓ of the medium and heavy units are then deployed in the right or left Arm. The remaining units are deployed in the opposite Arm, covered by skirmishers.

10.3.1.10 The Many Doors of Destiny

Common: Mu **Seldom:** - **Rare:** Ts, YK, Lv, Sa **Prohibited:** Sh

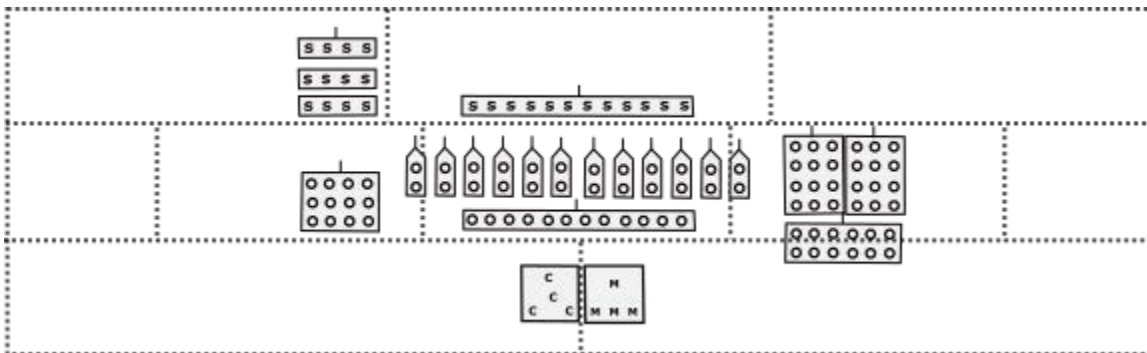

This formation consists of one, two, or three heavy phalanxes in the center (two being the number favored by the Mu'ugalavyáni); there are then two units in each of the Arm positions, one deployed far forward, and the other held back behind; the Left and Right Gauntlet positions are then occupied by one or more special "warhammer" units. Missile troops are concentrated in the gaps between these and also in the Left and Right Arrow positions. In very large battles the Arm and Gauntlet positions may be filled with several separate units, and as the great central phalanx rolls inexorably forward, the Army Commander can push forward first one and then another of these flanking units in an attempt to draw his opposite number off balance and thus gain the advantage.

In **Legions of Tékumel**, the medium and heavy units are equally divided among the Central Helm and the Left and Right Arms. The units in the center are usually deployed in Stone Mountain, while those on the right and left are deployed in the Mighty Block in various arrangements, which may also extend back into the Gauntlets. Skirmishers cover the front.

10.3.1.11 The Toothed Jaw of Might Qame'él

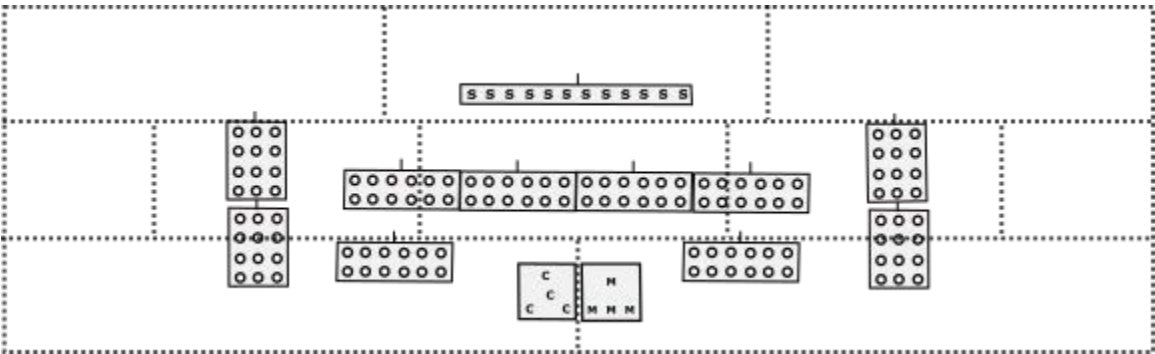

Common: Ts, Lv, YK **Seldom:** Mu, Sa **Rare:** - **Prohibited:** Sh

As the name indicates, this is primarily a Livyáni variant. Both Ssamíren and Sa'alúr describe this formation as being common to most of the armies of their time, and their name for it was the "Jaws of the Sró." (N.B. Several of the formation names given herein are those in current use, rather than the names originally provided by the ancient strategists: e.g. only a scholar of Bednálljan Salarvyáni would be able to identify the "Two Gates of Wurú" deployment as Ssamíren's "Two Walls of Brass" and Sa'alúr's "Ranks of Illimitable Might" formations.) This battle plan consists of a strong center divided into the wedges and squares of the "Teeth of Kra" formation (cf. below), with weaker flanking units in wedges or diamonds. Missile troops are usually concentrated on the flanks but may also be deployed through gaps in the center to fire and retreat. The Tsolyáni and the Yán Koryáni have employed variants of this plan from time to time.

10.3.1.12 The Oncoming Wings of the Hereafter

Common: Ts, YK, Sa, Pj Seldom: Mu, Lv Rare: - Prohibited: Sh

This battle plan consists of a strong center (variously divided into phalanxes, squares, wedges, etc.) and two long, fast-moving columns of lighter troops on the flanks, sometimes with “warhammer” units in concealment in one or both Greave positions behind. As the center meets the foe, one or both columns may attempt to cut off enemy flanking units for annihilation by the concealed “warhammer” units coming along behind, or they may swing out like great wings to try to outflank the enemy and attack him from the rear. This is particularly favored by the Yán Koryáni, the Pecháni, and the Salarvyáni, although the Tsolyáni have also used it in a few instances. Missile troops may be concentrated in the center Arrow position, or they may be posted on either flank in the Left or Right Arrow positions.

10.3.1.13 Alternate Unit Formations

The unit formations mentioned in the deployments above are the most standard. However, different armies may prefer some alternate formations. In any deployment, the Stone Mountain or Mighty Block may be replaced by the Embrace of Nayári. For units that are to move quickly, usually in the Gauntlets, they may be deployed in any Flexible formation. The concealing formations, such as Kruá Beneath the Sea, Gift of Nayári, or Bow of Hruggá may also replace Stone Mountain or Mighty Block formations.

10.4 Pre-Battle Spell Casting

During deployment, the Magic Users of the army may cast spells in preparation for the coming battle. These are usually cast as units deploy. See 9.2.1 Pre-battle Spell Casting for details.

10.5 Pre-Battle Duels

Once all units are placed and any spells cast, duels are declared and fought. There are two methods provided for fighting duels, Basic and Advanced.

D20	Result
1-6	No Glory
7-10	1 Glory Point
11-18	2 Glory Points
19-20	3 Glory Points

10.4.1 Basic Pre-Battle Duel

In the basic Pre-Battle Dual system, each side rolls a D20 and adds the number of Hero units in the army. They then consult the Duels result table:

10.6 Winning the Battle

In the basic scenario, a battle is fought for 6 turns. At the end of the 6th turn the defending player rolls a die. On a roll of 16+ on a D20 a 7th turn is played. At the end of the 7th turn a D20 is rolled again, on a 18+ the 8th turn is played. No turn is played after the 8th; the battle is over. The side with the most Glory Points at the end is the winner.

10.6.1 Determining Glory Points

Glory points (GP) can be accumulated during the Pre-Battle Duels and also during the battle itself. GPs collected and not spent from Pre-Battle Duels, destroyed enemy units (2 GPs), or overrunning and

destroying an enemy Dias (3 GPs) are added to any GPs collected at the end of the battle.

Add up all the victory points for each side and compare them to determine the level of victory.

At the end of the battle, a side also earns points for:

Both sides are even	Draw
Side has a 1-4 VP advantage	Minor Victory
Side has a 5-7 VP advantage	Major Victory
Side has an 8+ VP advantage	Smashing Victory

- 1 GP for each enemy unit spent
- 1 GP for controlling a Town, if one is on the battlefield
- 2 GP for controlling a Fort, if one is on the battlefield

Appendix 1: Terrain

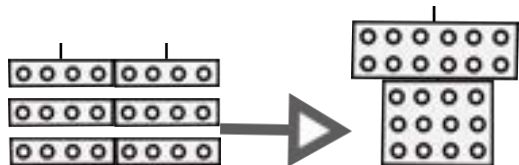

This table summarizes the effects of different terrain types on movement and combat.

Terrain	Effect on Movement	Effect on Shooting	Effect on Close Combat
Gentle Slope	None	Block LOS through it. Troops on hill may shoot over lower friends if 1" gap in front of and behind friends	1 Left shift fighting from lower contour.
Steep Slope	Linear Obstacle to climb. No effect going down.	Block LOS through it. Block LOS if lower unit is closer to the contour than the higher unit. Troops on hill may shoot over lower friends if 1" gap in front of and behind friends	2 Left shifts fighting from lower contour.
Stream	Linear Obstacle	None	1 Left shift when charging across it or fighting from the middle of it against enemy defending the banks.
River	Impassable	None	Impassable
Woods	Difficult Terrain	LOS 3" within it. Cover 1 Left shift.	1 Left shift
Crops	None	LOS 3" within it.	
Swamp	Difficult Terrain + Disrupted	LOS 3" within it. Cover 1 Left shift.	2 Left shift
Food of the Ssü	Impassable except to Ssü, Hlüss	LOS 3" within it. Cover 1 Left shift.	1 Left shift
Rocky, Sandy, Marsh	Difficult Terrain	None	1 Left shift
Village	None	No effect on LOS. Cover 1 Left shift.	1 Left shift against attacker
Town	Difficult Terrain	LOS 3" within it. Cover 2 Left shift. No Flanks.	2 Left shift against attacker. No Flanks
Fort	Difficult Terrain	LOS 3" within it. Cover 3-5 Left shift. No Flanks.	3-5 Left shift against attacker. No Flanks. Assault equipment needed to attack 4-5 Left shift forts.
Fortified Walls/Sákbe road	Impassable without Assault Equipment	LOS 3" within it. Cover 3-5 Left shift.	3-5 Left shift against attacker. Sapper attribute needed to attack 3-5 Left shift forts.
Low Road	If in The Serpent or wagons, Double movement speed.	None	None
Bridge	Linear Obstacle unless all are in The Serpent, carts, or wagons.	Consider to be in The Serpent formation while crossing. 1 Right shift as target.	Considered to be in The Serpent formation while attacking or fighting across. 3 Left shift against enemy defending the bridge.
Barricade/Entrenchments	Linear Obstacle	1 or 2 Left shift from front	1 or 2 Left shift from front against attacker

Appendix 2: Advanced Formations & Deployments

Certain arrangements of units recommended by ancient scholars are a bit more advanced.

5.4.1.18 The Kruá Beneath the Sea

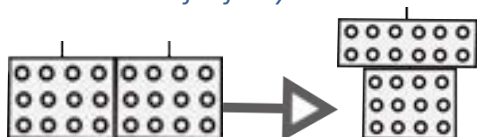

This is a series of lines similar to the preceding, but with a solid, heavy unit (often of Ahoggyá or Shen) concealed within the formation. As the human troops reach the enemy, those in front of the concealed unit are trained to run back between their lines and reveal the “Warhammer” unit — the deadly Kruá. This is a common Salarvyáni deployment, and it is occasionally used by the Yán Koryáni and Tsolyáni as well. The Mu’ugalavyáni and the Livyáni tend to disdain it.

In **LoT** this formation is initially represented by two units in the Waves of Chanayága formation deployed touching and moving at the same time (per rule 5.4.4 Group Moves). On any Command Phase for which the unit has Full Move, the second hidden unit is revealed and one of the original units is removed from play. The newly revealed unit (in Stone Mountain formations) is placed in the middle of the space where the two units were located with its FCP at the location of the previous units’ combined FCP. Then one of the original units is displaced immediately behind the newly revealed unit in support. The displaced unit may be in any formation when it reforms behind the new unit. Both units may then make a full movement together as a single move, including charging the enemy.

If the Kruá Beneath the Sea formation is charged in the enemy’s Movement Phase, the target unit may immediately make a Command Roll, and if successful with a full move, the concealed unit is swapped in as described above. If the roll is half move, the swap out is still made, but both the original and the newly placed unit are Disrupted. Then Charge Combat is fought as normal.

5.4.1.18 The Gift of Nayári

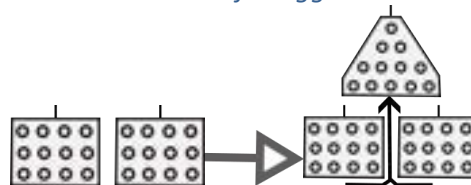

Named after the ancient queen of the Bednálljan Dynasty, this formation consists of medium or even heavy human troops deployed to conceal a powerful Shen or Ahoggyá unit within their “phalanx.” As contact nears, the human screening troops are trained to run to the sides and then back, while the nonhuman unit strikes the astonished enemy as hard as it can. This is also a Salarvyáni stratagem rarely practiced by other armies.

In **LoT** this formation is initially represented by two units in the Mighty Block formation deployed touching and moving at the same time (per rule 5.4.4 Group Moves). On any Command Phase for which the unit has Full Move, the second hidden unit is revealed and one of the originals is removed from play. The newly revealed unit (in Stone Mountain formations) is placed in the middle of the space where the two units were located with its front at the location of the previous unit front. Then one of the original units is displaced immediately behind the newly revealed unit in support. The displaced unit may be in any formation when it reforms behind the new unit. Both units may then make a full movement together as a single move, including charging the enemy.

If the Gift of Nayári formation is charged in the enemy’s Movement Phase, the target unit may immediately make a Command Roll, and if successful the concealed unit is swapped in as described above. If the roll is failed, the swap out is still made, but both the original and the newly placed unit are Disrupted. Then Charge Combat is fought as normal.

5.4.1.19 The Bow of Hruggá

This formation consists of two phalanxes with a narrow gap between them. A special unit of crack troops is poised at the rear of one (or both) of the phalanxes, and just before contact with the enemy is made, these

picked troops race down the lane between their two phalanxes and hit the foe in a powerful wedge formation. The objective is to split the enemy in two and force a gap which can be exploited by further troops from the rear ranks. This is much favored by Sa'alúr, and the Salarvyáni (who prefer his manual to all others) often use it. The Bow of Hruggá is known to other nations, of course, and it was even used once — rather improbably — by the N'lüss against a punitive Mu'ugalavyáni expedition sent against them. The scarlet-clad battalions of the Four Palaces of the Square were so surprised that they would have lost the battle, had it not been for their superior magic.

In **LoT** this formation is initially represented by two units in the Mighty Block formation deployed with a gap of one or two inches between them and moving at the same time (per rule 5.4.4 Group Moves). On any Command Phase for which the unit has Full Move, the hidden unit is revealed at the rear of the unit in the Divider of Foes formation. The newly revealed unit is then moved through the gap up to a full move straight ahead. It may charge enemy units. The two concealing units must remain stationary in the turn that the “arrow” unit is revealed and moved. For this formation to be activated, there must be sufficient room to place the wedge in front of the concealing units.

If there is not sufficient room to deploy the hidden unit, on any Command Phase the hidden unit may be revealed at the back of the concealing units. It is deployed in the Blade of the Sword formation and may immediately roll for command to move, change formation, etc. However, if the hidden unit is placed like this, it may not then be used as the “arrow” subsequently.

5.4.1.20 *The Ghár of the Deeps*

This is not so much a separate formation as it is a defensive stance. Units in several of the preceding formations (especially the Stone Mountain, the Mighty Block, the Divider of Foes, the Crystal Square, the Towers of Púrdanim, etc.) can be ordered to form a shield wall to their front and left; those in the center hold their shields over their heads, and those on the right are either left handed men or else are ordered to sling their shields on their right sides. The formation then moves forward at a diagonal, as a Ghar does, almost totally shielded from enemy missile fire. This is a

common deployment for troops attacking higher fortifications, or who are badly outmatched in missile capabilities. All of the five major nations use this formation, and many of the smaller ones are familiar with it as well.

In **LoT** this stance is indicated by facing the outer figures of the flanks and rear to the base edge. Units in this formation move one category lower than the standard movement class for that formation (i.e., a unit in Stone Mountain which has adopted the Ghár of the Deeps moves at Limited rather than Formed. Limited units may still move as Limited while in this stance. The stance is immediately lost when the unit starts a Charge or otherwise has come into contact with the enemy. Units in this stance may not shoot.

5.4.1.21 *The Curtain of Unseeing*

Again, this is not strictly a “formation” but rather a trick devised by Ssamíren. In order to create confusion and to prevent the enemy commander or his Hláka scouts from discerning one's deployment, light troops in the forward Arrow positions are trained to stamp their feet and create a cloud of dust, if the weather and the chosen battle ground permit. This has the disadvantage of concealing and discomfiting one's own troops, of course; yet in many battlefield situations it is the only means of maintaining secrecy for one's maneuvers. The “Curtain of Unseeing” is therefore a common defense against the Hláka, and, as the Tsolyáni adage has it, “The best answer to a Hláka is a mouthful of dust — or an arrow in the belly.

Utilizing the Curtain of unseeing is declared when a unit is deployed. Instead of placing the unit, place a cloud of dust equal to the frontage and depth of the unit and extend downwind 1" if the wind is a “slight breeze” or 2" if “windy” (see section 10.2.3 Weather). For example, a unit in the Sword of the Blade formation is employing the Curtain of Unseeing during a “slight breeze”, then: 1) place an area of dust 1" x 12" where the unit would normally have deployed; 2) expand the dust area by 1" in the direction the wind is blowing. If the wind is “windy” then the unit creating the dust can be seen by the enemy unless they are all downwind.

Dust blocks line for sight (LOS) from any height, including flyers. Units performing the Curtain of Unseeing may neither move nor shoot. They may be shot at as if in cover that offers a column shift 2 to the left. The dust dissipates immediately when a unit

declares that it is no longer creating dust during the Command Phase.

5.4.1.22 Deploying Concealed Units

When deploying concealed units at the beginning of the battle, a few special procedures must be followed. Utilizing the Curtain of Unseeing is declared when a unit is deployed and the process described above is used.

When deploying the stratagems the Kruá Beneath the Sea and the Gift of Nayári, the hidden unit is kept off the table and a substitute unit is deployed instead according to the requirements of the stratagem. For the Bow of Hruggá, the hidden unit is simply not deployed until the stratagem is sprung.

5.4.1.23 Revealing Concealed Units

The success of the preceding stratagems depends upon the inability of the enemy to discern the concealed units. This is often achieved by raising clouds of dust (see above) or by magical spells of non-seeing.

Concealment is especially difficult if the enemy have flying Hláka scouts or a command post situated high above the battlefield. Even so, the Salarvyáni succeeded with this deployment in 1,219 A.S. by providing the concealed unit, a small phalanx of Ahoggyá, with large shields similar to those used by the concealing unit (a body of heavy infantry). Holding these over their carapaces in the "Ghar of the Deeps" formation (see below), the Ahoggyá deceived the Hláka scouts of the Tsolyáni into believing that the entire group was composed of human troops.

In **Legions of Tékumel**, unless covered by dust, the units hidden by the Kruá Beneath the Sea, the Gift of Nayári, and the Bow of Hruggá are revealed when Hláka or air cars fly directly over them. In this case, the type of unit hidden (weapons, armor grade and species) is told to the opposing player, but the units are not swapped out or placed until the player controlling the units of the stratagem places them per the usual rules for that stratagem.

Shoot	1L	Target	--

Buckler of Qíyor

This spell creates a magical barrier over one friendly unit, protecting it from missile attacks.

Cost: 2

Target: One friendly unit within LOS.

Effect: Any shooting at the target unit will suffer shift Left of 6. This spell only affects physical missiles, including Serudlá spit, but not magical spells or the beam or a Lighting Bringer. It may not be stacked.

Duraton: Lasts until the target unit suffers a casualty from shooting or it is dispelled.

Fist of Vimúhla

This spell hurls sorcerous fire or lightning at the enemy.

Cost: 2

Target: One enemy unit within LOS.

Effects: Shooting attack of Factor 15. Unit's Defense does not apply.

Duration: Instantaneous

Embrace of Sárku

A mighty shadow of fear is cast over opposing troops.

Cost: 2

Target: One enemy unit within LOS.

Effects: Unit suffers a shooting attack at factor 28; however, no casualties are suffered, only the movement and morale effects are applied. These factors are shifted according to the target unit's Quality: Raw 2R, Trained 0, Veteran1L, Elite 2L.

Duration: Instantaneous

Exertions of the God-King

This spell fills its subject with miraculous endurance, inspiring warriors to redouble their efforts under the marvelous influence of magical energy.

Cost: 2

Target: One friendly unit within LOS.

Effect: The target unit may make a second Command and Roll during the Command Phase and perform actions allowed. It may be stacked, but used only once per Command Phase.

Duration: Until used or dispelled.

Gift of Karakán

This imbues the subject unit with vigor and bravery, elevating their combat capabilities and tactical acumen.

Cost: 1

Target: One friendly unit within LOS.

Effect: Unit rolls 2D20 for Combat (Shooting, Charge, or Melee) or Command and applies the highest roll. The spell may be stacked on a unit but may only be used once per phase. For example, a unit with three Gifts of Karakán on it could use one for Command, then use another for Offensive Shooting and then the last one for Close Combat.

Duration: Until used or dispelled.

Hnálla's Radiant Barrier

This defensive spell disrupts enemy magic by blocking its effect as it is cast. The Hnálla's Radiant Barrier is cast in response to an enemy spell that is being cast.

Cost: 1-2 (same as spell to be blocked)

Target: One enemy Magic User unit in LOS.

Effect: This spell is the only one that can be played in the opponent's magic phases. When the opposing player declares a spell to be cast and its target, you must decide whether to expend points and attempt to block the enemy spell. If you decide to attempt to block the enemy spell, then you must roll for the success of this spell. If the roll is successful, then the enemy must apply a -6 to his spell success roll.

Duration: Instantaneous

Shield of Hríü

This defensive spell protects a unit from enemy magical spells.

Cost: 1

Target: One friendly unit in LOS

Effect: Enemy spells cast against a unit protected by the Shield of Hríü must make a success roll with a -8 modifier to cast their spells against the protected unit. The -8 modifier does not apply against the Light of Sapient Glory cast against the Shield of Hríü spell itself.

Duration: Until an enemy spell is successful against the protected unit or it is dispelled by the Light of Sapient Glory.

Visions of Drá the Uncaring

This spell calms and slows the target unit.

Cost: 1

Target: One unit within LOS.

Effect: Unit's normal movement is halved. These spells may be stacked, each reducing the target's movement by half, to a minimum of 1".

Duration: Until the after the Command phase in which the affected unit makes a command roll of 13 or better or it is dispelled. Even if not required to make a movement, a unit may make a command roll in an attempt to break the effects of the spell.

Scintillation of the Ebon Flame

This spell creates phantasms of units or terrain. Within line of sight, the caster may cause to appear a single unit of any sort, which should then be placed on the table in a desired formation. Alternatively, the caster may place a single phantasmal terrain piece, not to exceed two levels high and 36" square, with a minimum dimension of 3". (For example, 3" x 9" is allowed, but 3" x 18" is not.)

Note: this spell may be cast during deployment one time and in such a case it automatically succeeds.

Cost: 1 for phantom terrain; 2 for phantom unit

Target: When cast during deployment, the player may deploy this as a unit or as a piece of his allowed terrain. He should note a unit or terrain piece that this is a phantasm. Spent Spell Points must be marked off.

When cast during the course of the game, a target is placed on the battlefield within LOS of the caster.

Effect: The terrain phantasm has its full effect of that terrain until the spell expires or is dispelled, including when units move into or through it.

If a phantasmal unit is conjured, it is placed on the target marker and then it moves like any other unit of the type depicted. A unit phantasm will have no effects for shooting or combat directly, but they may offer rear support to friends and will cause hated enemies to react.

Duration: The phantasm persists until any one of the following happens:

- it is out of LOS of the caster
- enemy troops contact or move through the terrain phantasm
- enemy troops contact the unit phantasm
- it is dispelled
- the caster declares it ended or casts another Scintillation of the Ebon Flame spell.

Veil of Invisibility

This spell renders any unit invisible to some degree. The unit becomes more difficult to target for shooting and fighting in Charge Combat. However, the effects they have on the physical world are still evident, like dust churned up, crops trampled, etc.

Type: Offensive (Auto)

Cost: 3

Target: one friendly unit within LOS.

Effect: Invisible units are represented on the table by a unit formation tray with no miniatures. invisible units that are shot at gain an additional 4 Left shifts Defense. In addition, invisible units may not be the object of a charge, but they may be contacted incidentally during movement. If contacted, the charging unit does not get Offensive fire, as they were not sure of the enemy's location. During Charge combat, the invisible unit gets a 2 Right shift and the enemy suffers a 2 Left shift. In addition, invisible units may not support friends, nor are hated enemies forced to attack them. Invisible troops are treated as in Difficult terrain for command purposes, suffering a -2 modifier. If they are in Difficult terrain, it is not applied twice.

Duration: Invisibility persists until any one of the following happens:

- the unit is out of LOS of the caster
- after being involved in close combat (immediately after resolving the combat, the unit becomes visible)
- it is dispelled
- the caster declares it ended

Light of Sapient Glory

This spell is used to dispel enemy spells with duration.

Type: Defensive (Rolled)

Cost: 1

Target: It may only be cast on already active spells. It may be cast on any magically protected or affected unit or phantasm to dispel the magical effect, which must not have an Instant duration.

Effect: A success must be rolled to overcome an enemy spell and dispel it. If cast successfully, the target spell is dispelled immediately. In the case of phantasms, they are immediately removed from the table. In the case of other spells, all effects, or future effects, immediately cease. It only affects a single spell. So if several spells are affecting a unit, the player must choose which to affect. For stacked spells, it only removes one of them.

Duration: instantaneous

Magic Point Tracks

The *Legions of Tékumel* Clash!

Tens of thousands of soldiers align themselves according to the ancient manuals of war. Standing high on wooden daises, the noble commanders survey their armies. Challenges are made, and champions fight as the two sides cheer on their favorites. The auguries are cast and the great war horns, drums, and gongs sound the advance. Priests chant and call forth powerful magics that crackle across the sky. Dust rises as the armies of men and their allies, the Shén, the Pé Chói, the Ahoggyá and others, meet in a titanic struggle on the field of battle in the Great War – the Qadárdàlikoi – that may settle the fate of nations.

Now, with **Legions of Tékumel** you can field the armies of the Five Empires in miniature to fight the battles that Tsolyánu, Yán Kór, Mu'ugalavyá, Livyánu, Salarvyá and their allies wage against one another for domination of Tékumel. *Legions of Tékumel* is designed to allow you to complete in only a few hours a large battle representing up to 50,000 combatants on a side. The companion volume, **Armies of the Legions of Tékumel**, provides the army cards you can print and cut out to assemble your armies.

Miniatures are available from <https://www.legionsoftekumel.com>, as are free STLs of unit formation trays. More miniatures may be found on <https://www.thingiverse.com> and from <https://ralparthalegacy.com/>.
